Title: SOPHIE+ spectrograph for the follow-up of transiting exoplanets
Type: Poster
Session: Future Exoplanet Telescopes and Instrumentation
Abstract: The SOPHIE+ spectrograph, installed in 2006 on the 1.93-m telescope of Haute-Provence Observatory (France), is mainly dedicated to the search for exoplanets and to the follow-up of exoplanet transiting candidates. The characteristic and performances of the instrument are presented. The recent and on-going improvements of the spectrograph are described. An overview of the on-going and future large programs of transit follow-up is provided.
