Title: Kepler's insights into binary stars and their planets  
Type: Invited Talk  
Session: Eclipsing and Interacting Binaries  
Abstract: In this review I will highlight Kepler's contributions to our understanding of binary and multiple star systems, with an emphasis on their resident planets. I will describe recent results on circumbinary planet formation and circumbinary planetary dynamics. Finally, I comment on the progress that can be made even in the absence of new high precision Kepler data.
