Doug Wiemer (Ball Aerospace) was awarded NASA's Exceptional Public Achievement medal last month for K2

For K2 to be funded, science had to be demonstrated

A TECHNIQUE FOR EXTRACTING HIGHLY PRECISE PHOTOMETRY FOR THE TWO-WHEELED *Kepler* MISSION

ANDREW VANDERBURG^{1,2} & JOHN ASHER JOHNSON³

Harvard-Smithsonian Center for Astrophysics, 60 Garden St., Cambridge, MA 02138

A systematic search for transiting planets in the *K2* data

Daniel Foreman-Mackey^{1,2}, Benjamin T. Montet^{3,4}, David W. Hogg^{2,5,6},
Timothy D. Morton⁷, Dun Wang², & Bernhard Schölkopf⁸

Photometry of Very Bright Stars with *Kepler* and *K2* Smear Data

B. J. S. Pope,^{1*} T. R. White^{2,3}, D. Huber^{4,5,6}, S. J. Murphy^{4,6}, T. R. Bedding^{4,6},
D. A. Caldwell^{7,5}, A. Sarai⁴, S. Aigrain¹, and T. Barclay^{7,8}

CAMPAIGN 9 OF THE *K2* MISSION: OBSERVATIONAL PARAMETERS, SCIENTIFIC DRIVERS, AND COMMUNITY INVOLVEMENT FOR A SIMULTANEOUS SPACE- AND GROUND-BASED MICROLENSING SURVEY

CALEN B. HENDERSON^{1,A}, RADOSŁAW POLESKI^{2,3}, MATTHEW PENNY^{2,B}, RACHEL A. STREET⁴, DAVID P. BENNETT⁵,
DAVID W. HOGG^{6,7}, B. SCOTT CAULFIELD²

K2 lead authors are early-career researchers

Success! Your work triggered NASA to fund K2 through the end of mission 🎉

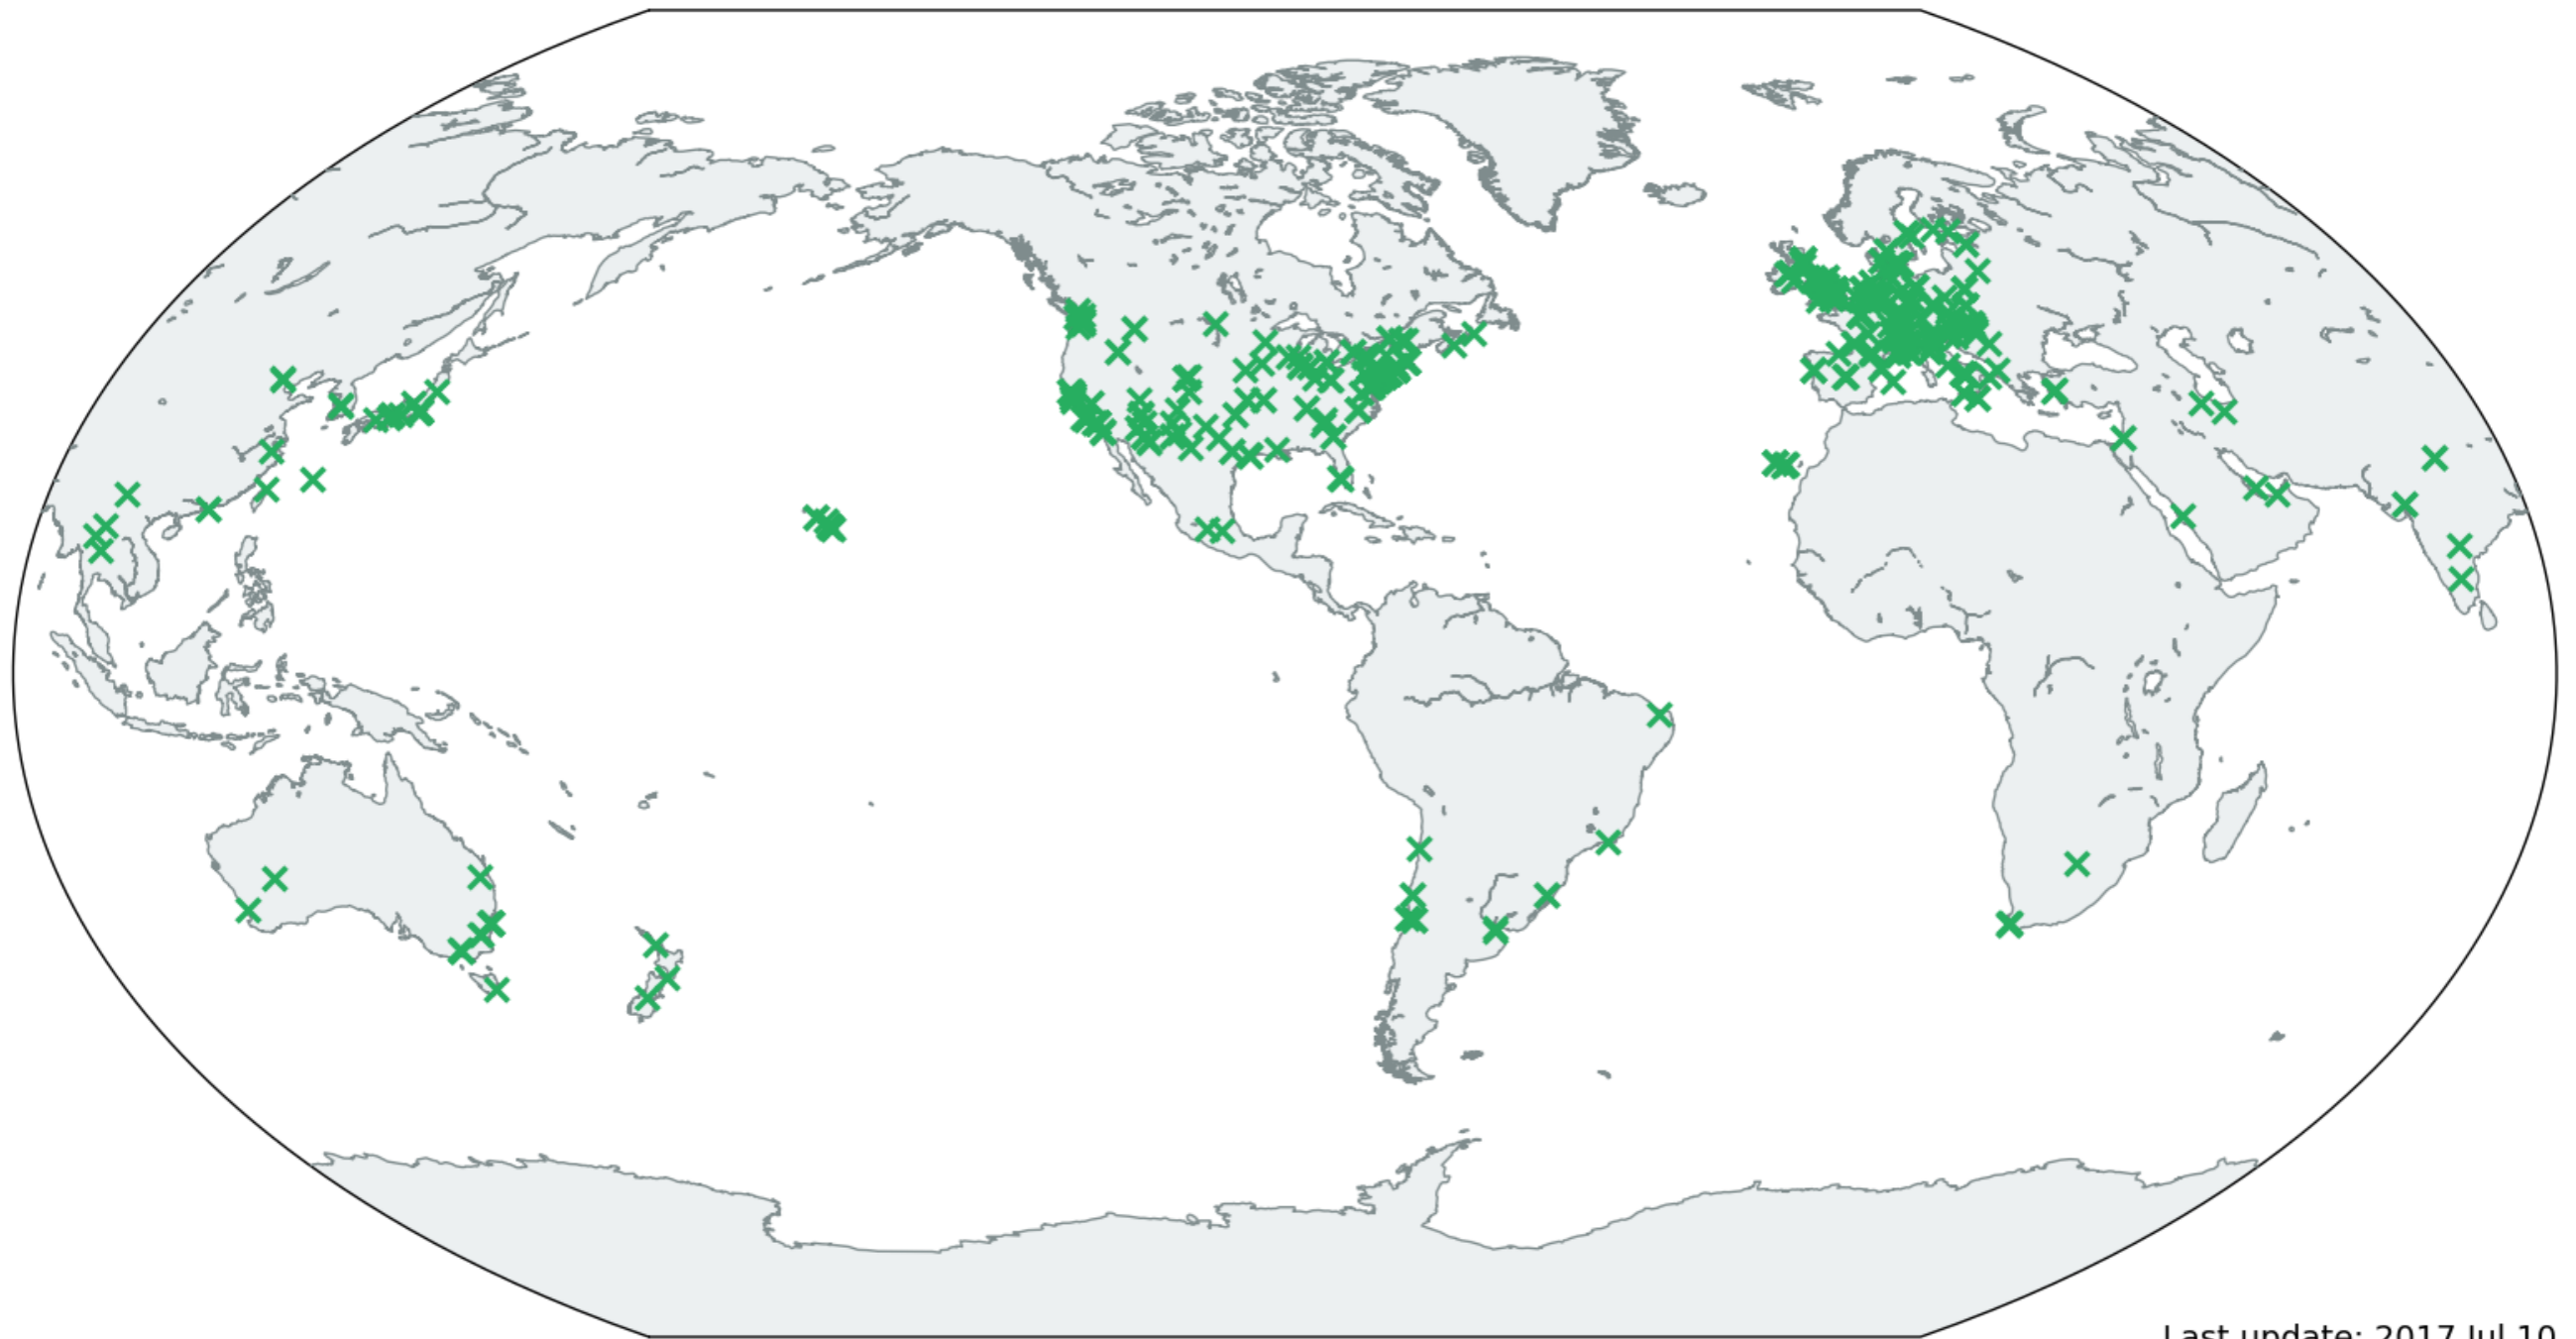

2016 NASA Astrophysics Senior Review

22-25 February, 2016

Summary of NASA decisions

- Chandra X-ray Observatory: continued operation is confirmed.
- Fermi Gamma-ray Space telescope: extension is approved.
- Hubble Space Telescope: continued operation is confirmed.
- **K2 mission: extension is approved through end of mission.**
- Nuclear Spectroscopic Telescope Array (NuSTAR): extension is

K2's open data is empowering talent across institutions

Sagan Fellow

Rodriguez et al (2017)

Sagan Fellow

this work

Sagan Fellow

this work

The K2 mission is your mission.

99 Kepler/K2 papers have a Sagan Fellow as first author.

These papers have been cited 3943 times.

Sagan, Koch, & Tarter gave the Kepler spacecraft its name

- (4) orbit changed from Lagrange L2 to a heliocentric orbit. (This change allowed omission of rocket engines and fuel required to stay at L2, allowed the use of a smaller launch vehicle, and decreased the estimated cost.)
- (5) mission name changed from FRESIP to Kepler at the request of several team members (Dave Koch, Carl Sagan, Jill Tarter). The name change honored Johannes Kepler, the astronomer who discovered the laws of planetary motion and who had contributed to the development of optics.

To demonstrate that the Mission would fit within the cost

Borucki (2016)

Should we rename K2 to the “Sagan Fellow Mission”?

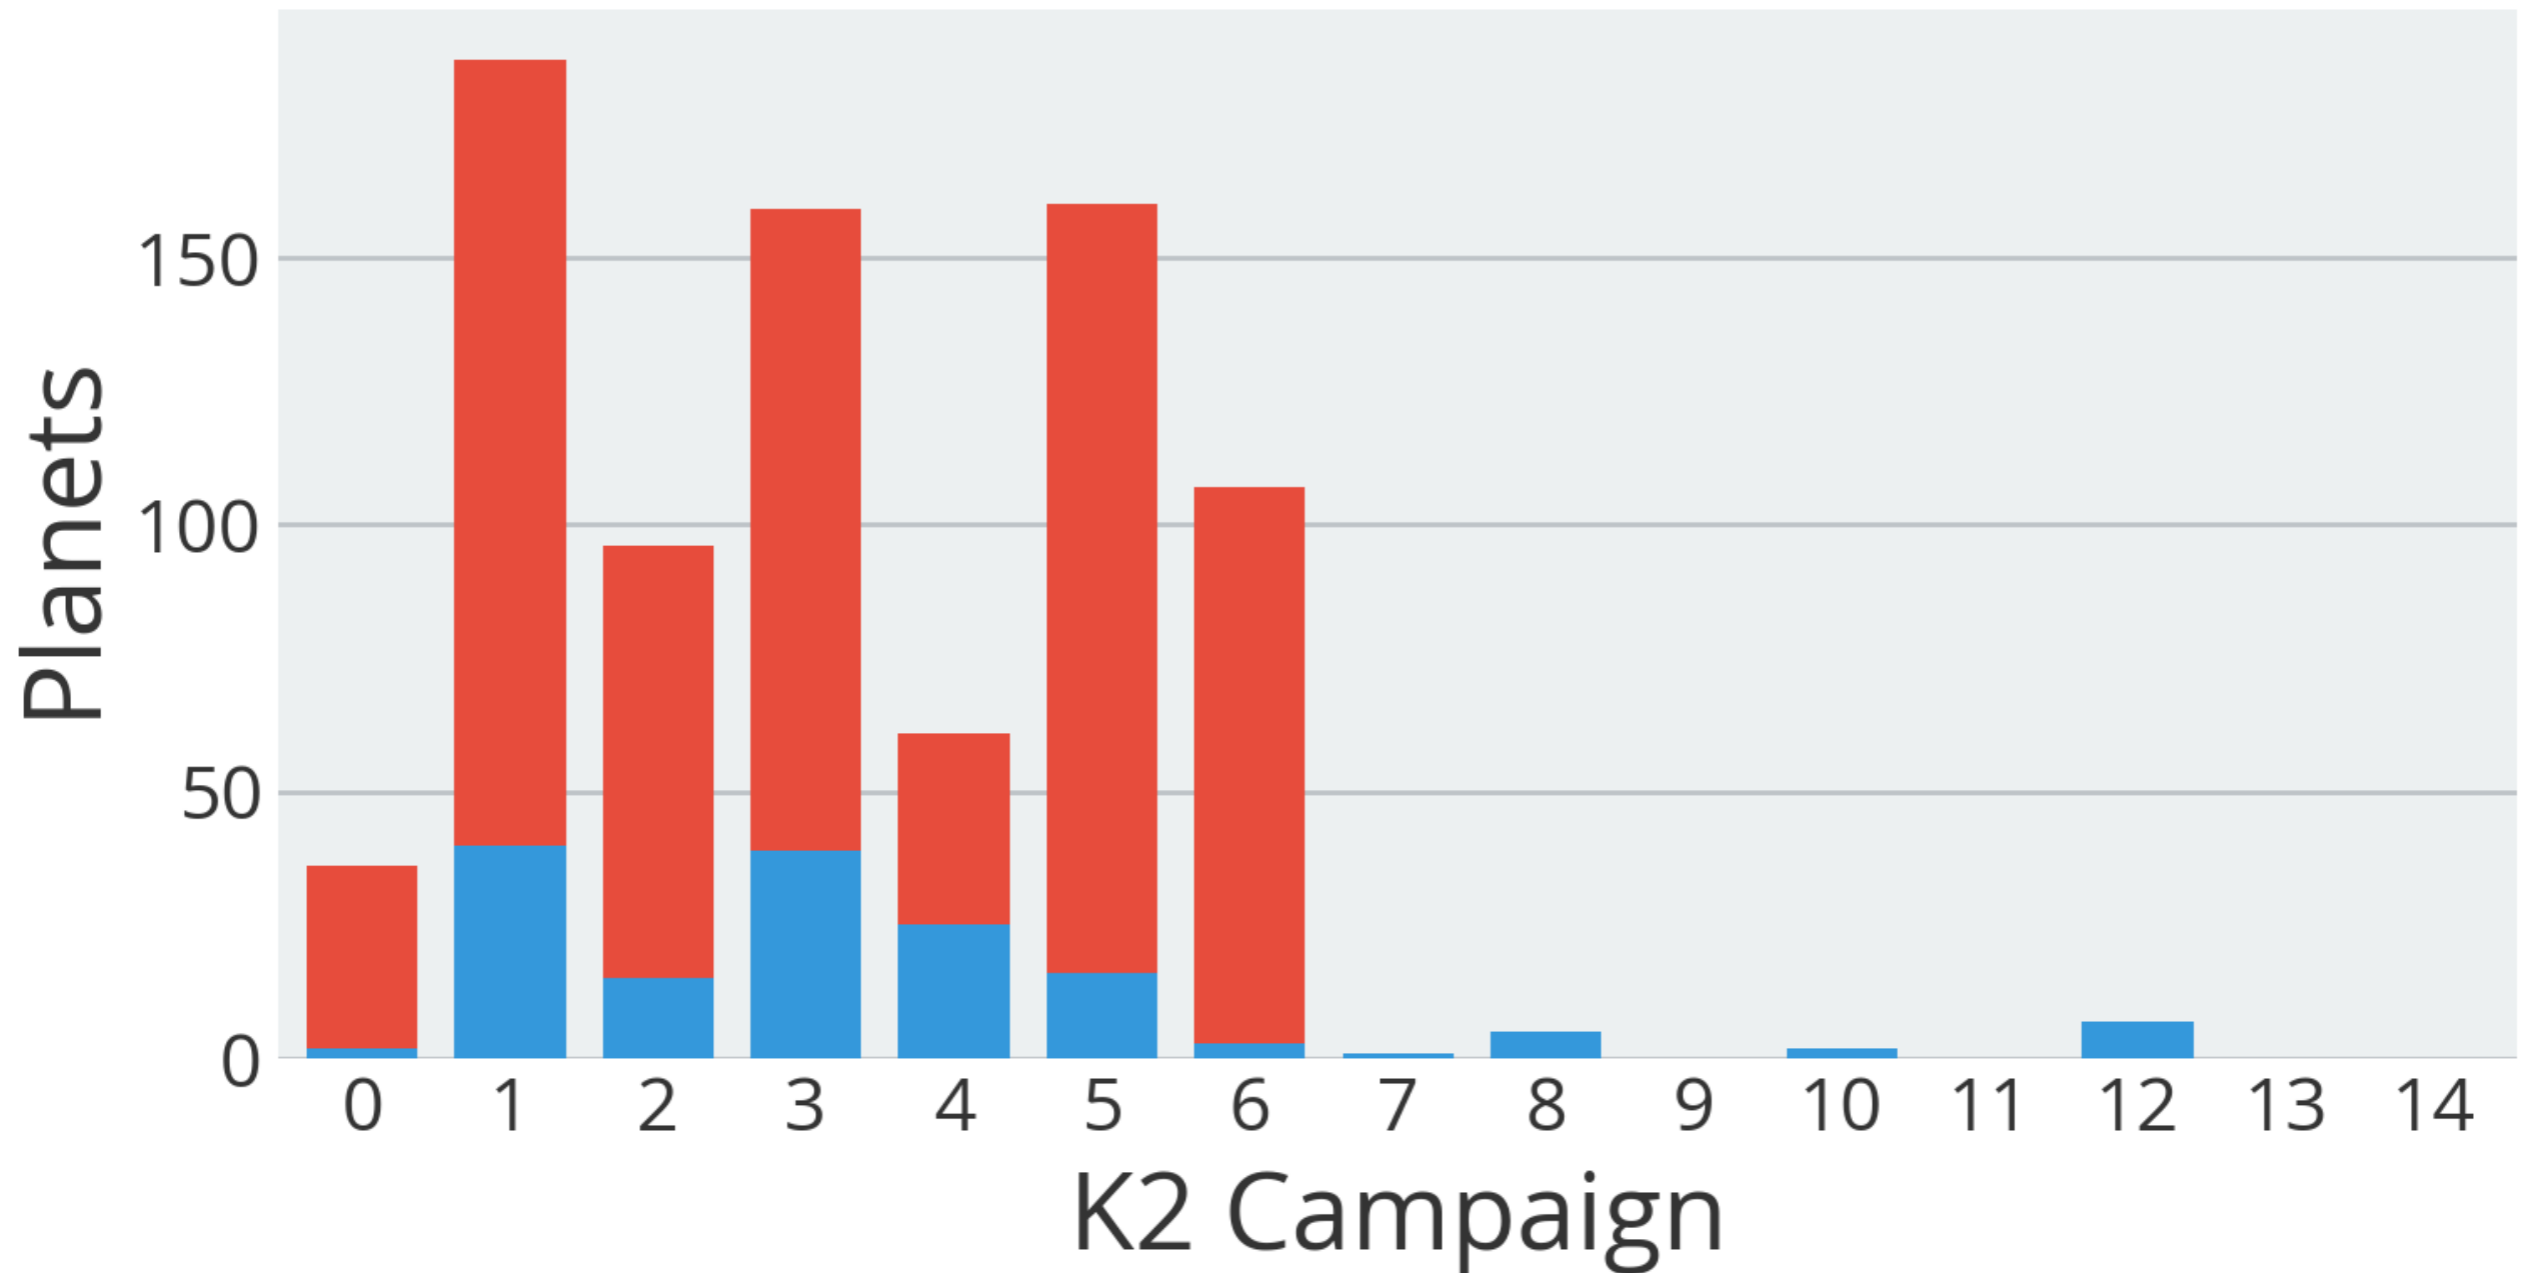

Vanderburg et al (2017)

“Not yet! The Sagan Fellows have work left to do.”

— nobody in particular

You have planets left to find, confirm, and publish!

■ Candidate planets (published) ■ Confirmed planets (published)

(It may take a few years to get things right.)

Thompson et al (2017)
arXiv:1710.06758

K2's archived data set size just increased by 50%

K2 has now surpassed the number of unique targets that were observed during Kepler's prime mission

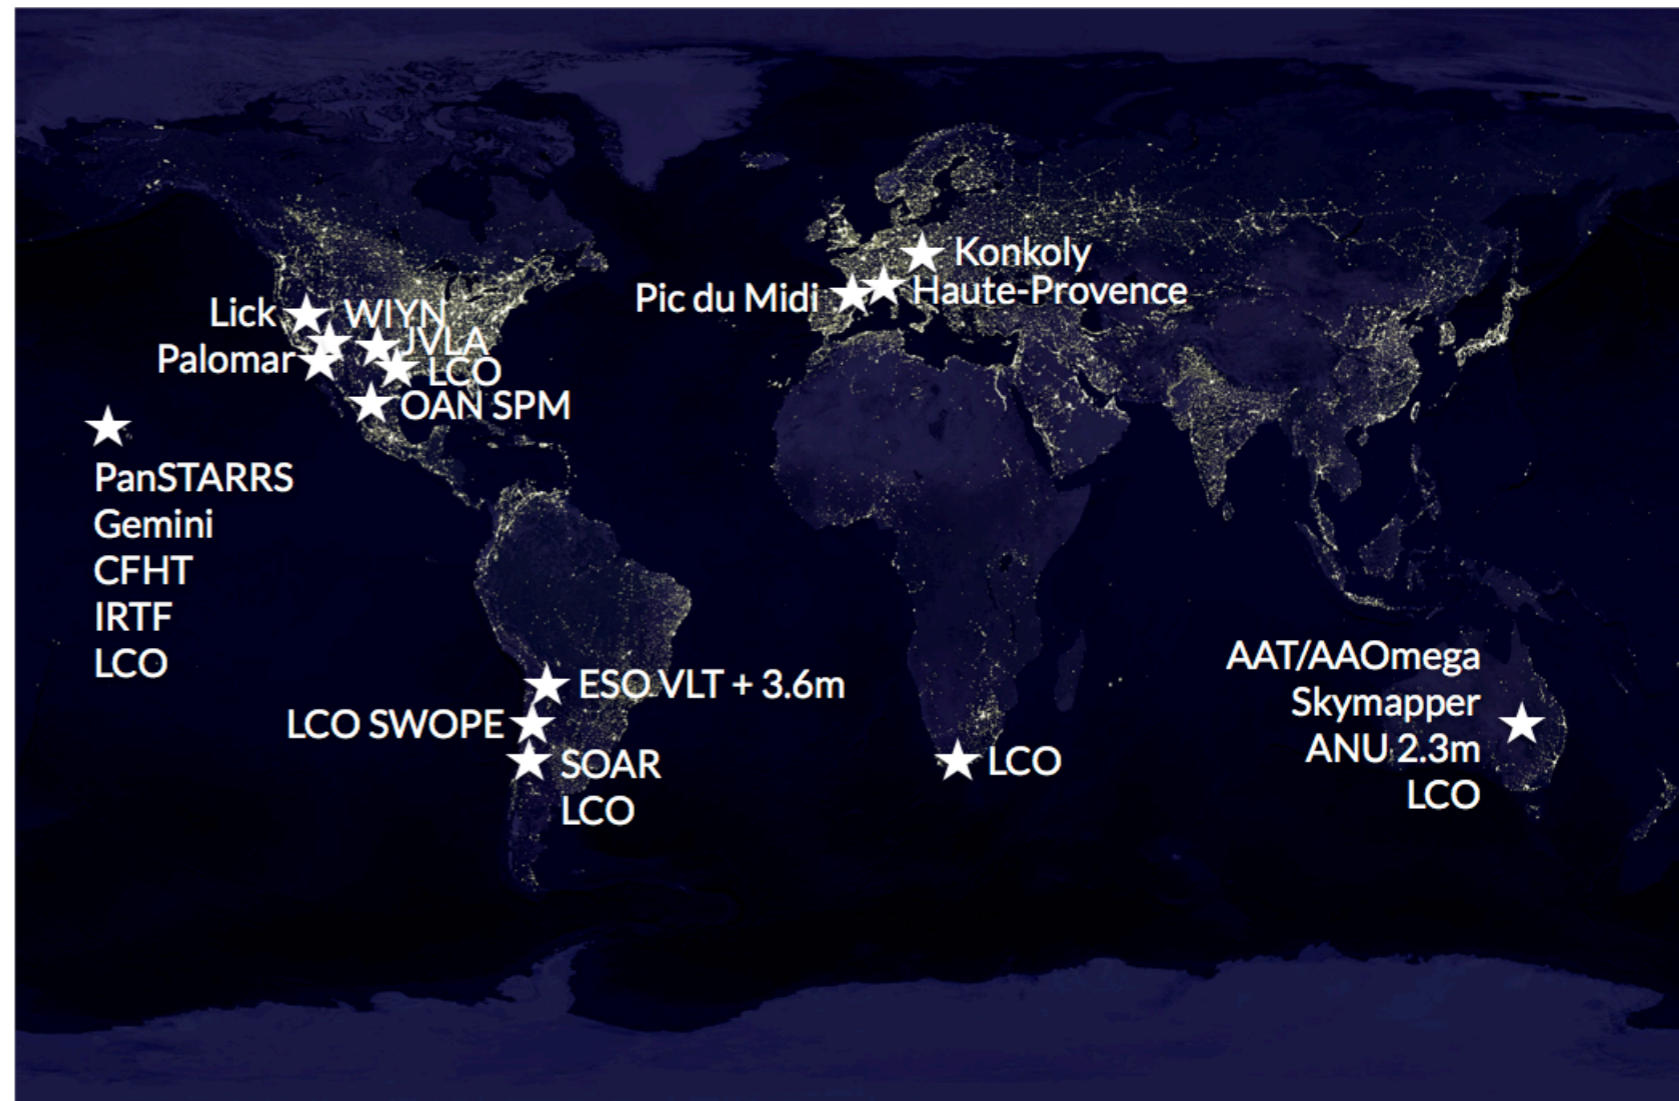

K2's scientific exploitation is only just getting started

K2's Campaigns 16 & 17 will enable new science

The community has secured **>24 ground-based facilities** to support the forward-facing Campaigns 16 & 17:

- Enables spectroscopic characterization of **supernovae**.
- Enables **simultaneous measurements of RV jitter and photometric stability** to Kepler precision.
- Observe **dozens of unconfirmed Earth-sized planet candidates** seen in previous Campaigns.

Campaign 18 revisits K2's legacy field

Campaign 18 will revisit the key part of the sky that includes **benchmark solar-like (M67) and young (M44) star clusters.**

This is **K2's legacy field**; it will benefit from a 3-year baseline and 8-month duty cycle.

Enables prime-mission-like science at a different Galactic sight line from the original mission:

- Exoplanet TTVs;
- Long-term stellar activity;
- Asteroseismology.

Proposal opportunities

DDT deadlines for exceptional targets:

C17: Nov 30, 2017 (any new planets from C6?)

C18: Jan 19, 2018 (any new planets from C5?)

C19: Apr 12, 2018 (any new planets from C12?)

K2 Cycle 6 Phase-2 deadline for funding (~\$20-\$150k grants):

Apr 19, 2018

Proposals may only use C17-18-19 targets selected in Phase-1 (target lists to be published in February). See ROSES D.7 for details.

Also: propose to ADAP and XRP!

We can help! Introducing the new K2 GO team:

Dr Michael Gully-Santiago

Supernova experiment support
Low-fuel science simulations
Systematics removal tutorials

Dr Ann Marie Cody

Crowded field photometry support
High Level Science Product manager
Workshop organizer

Dr Christina Hedges

Science tutorials
Solar System light curves
Chromatic aberration expert

Zé Vinícius (intern)

PyKE community tools
PSF photometry expert
Probabilistic inference

PyKE: Kepler, K2 & TESS Data Analysis Tools

Welcome to the PyKE documentation!

PyKE is a set of data analysis tools which offer a user-friendly way to inspect and analyze pixels and lightcurves obtained by NASA's Kepler, K2, and TESS missions.

What's new in PyKE 3.0?

PyKE is turning into an AstroPy-quality library for building your custom pipelines and tools

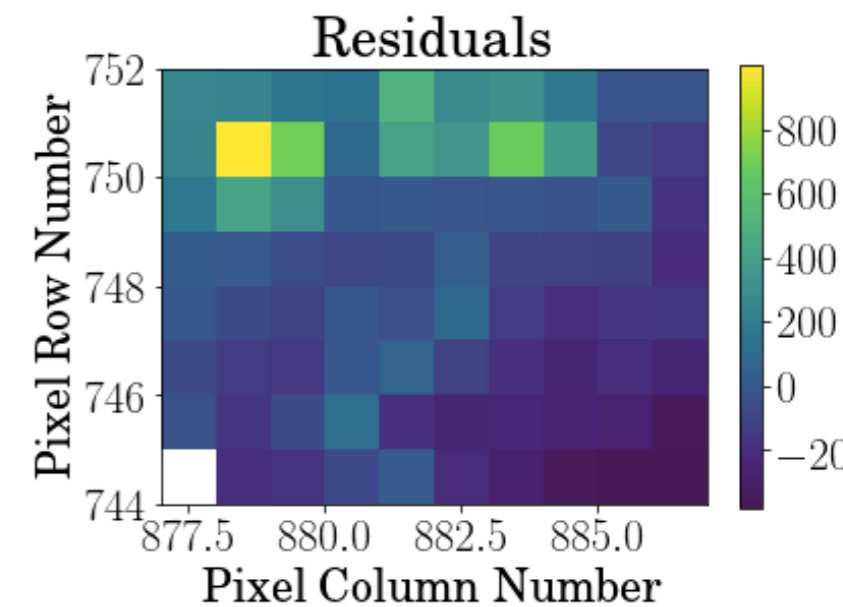

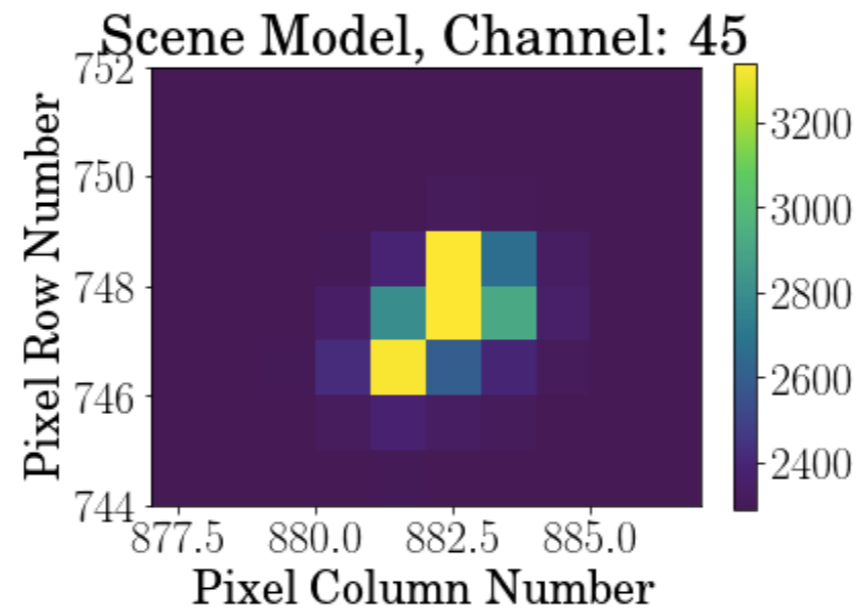

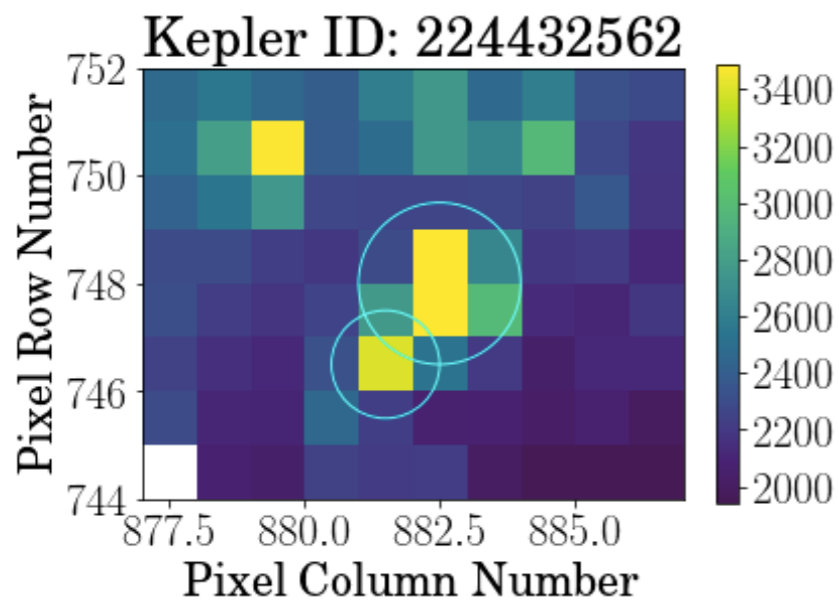

```
from pyke import KeplerTargetPixelFile

tpf = KeplerTargetPixelFile("file.fits")
tpf.show_movie()

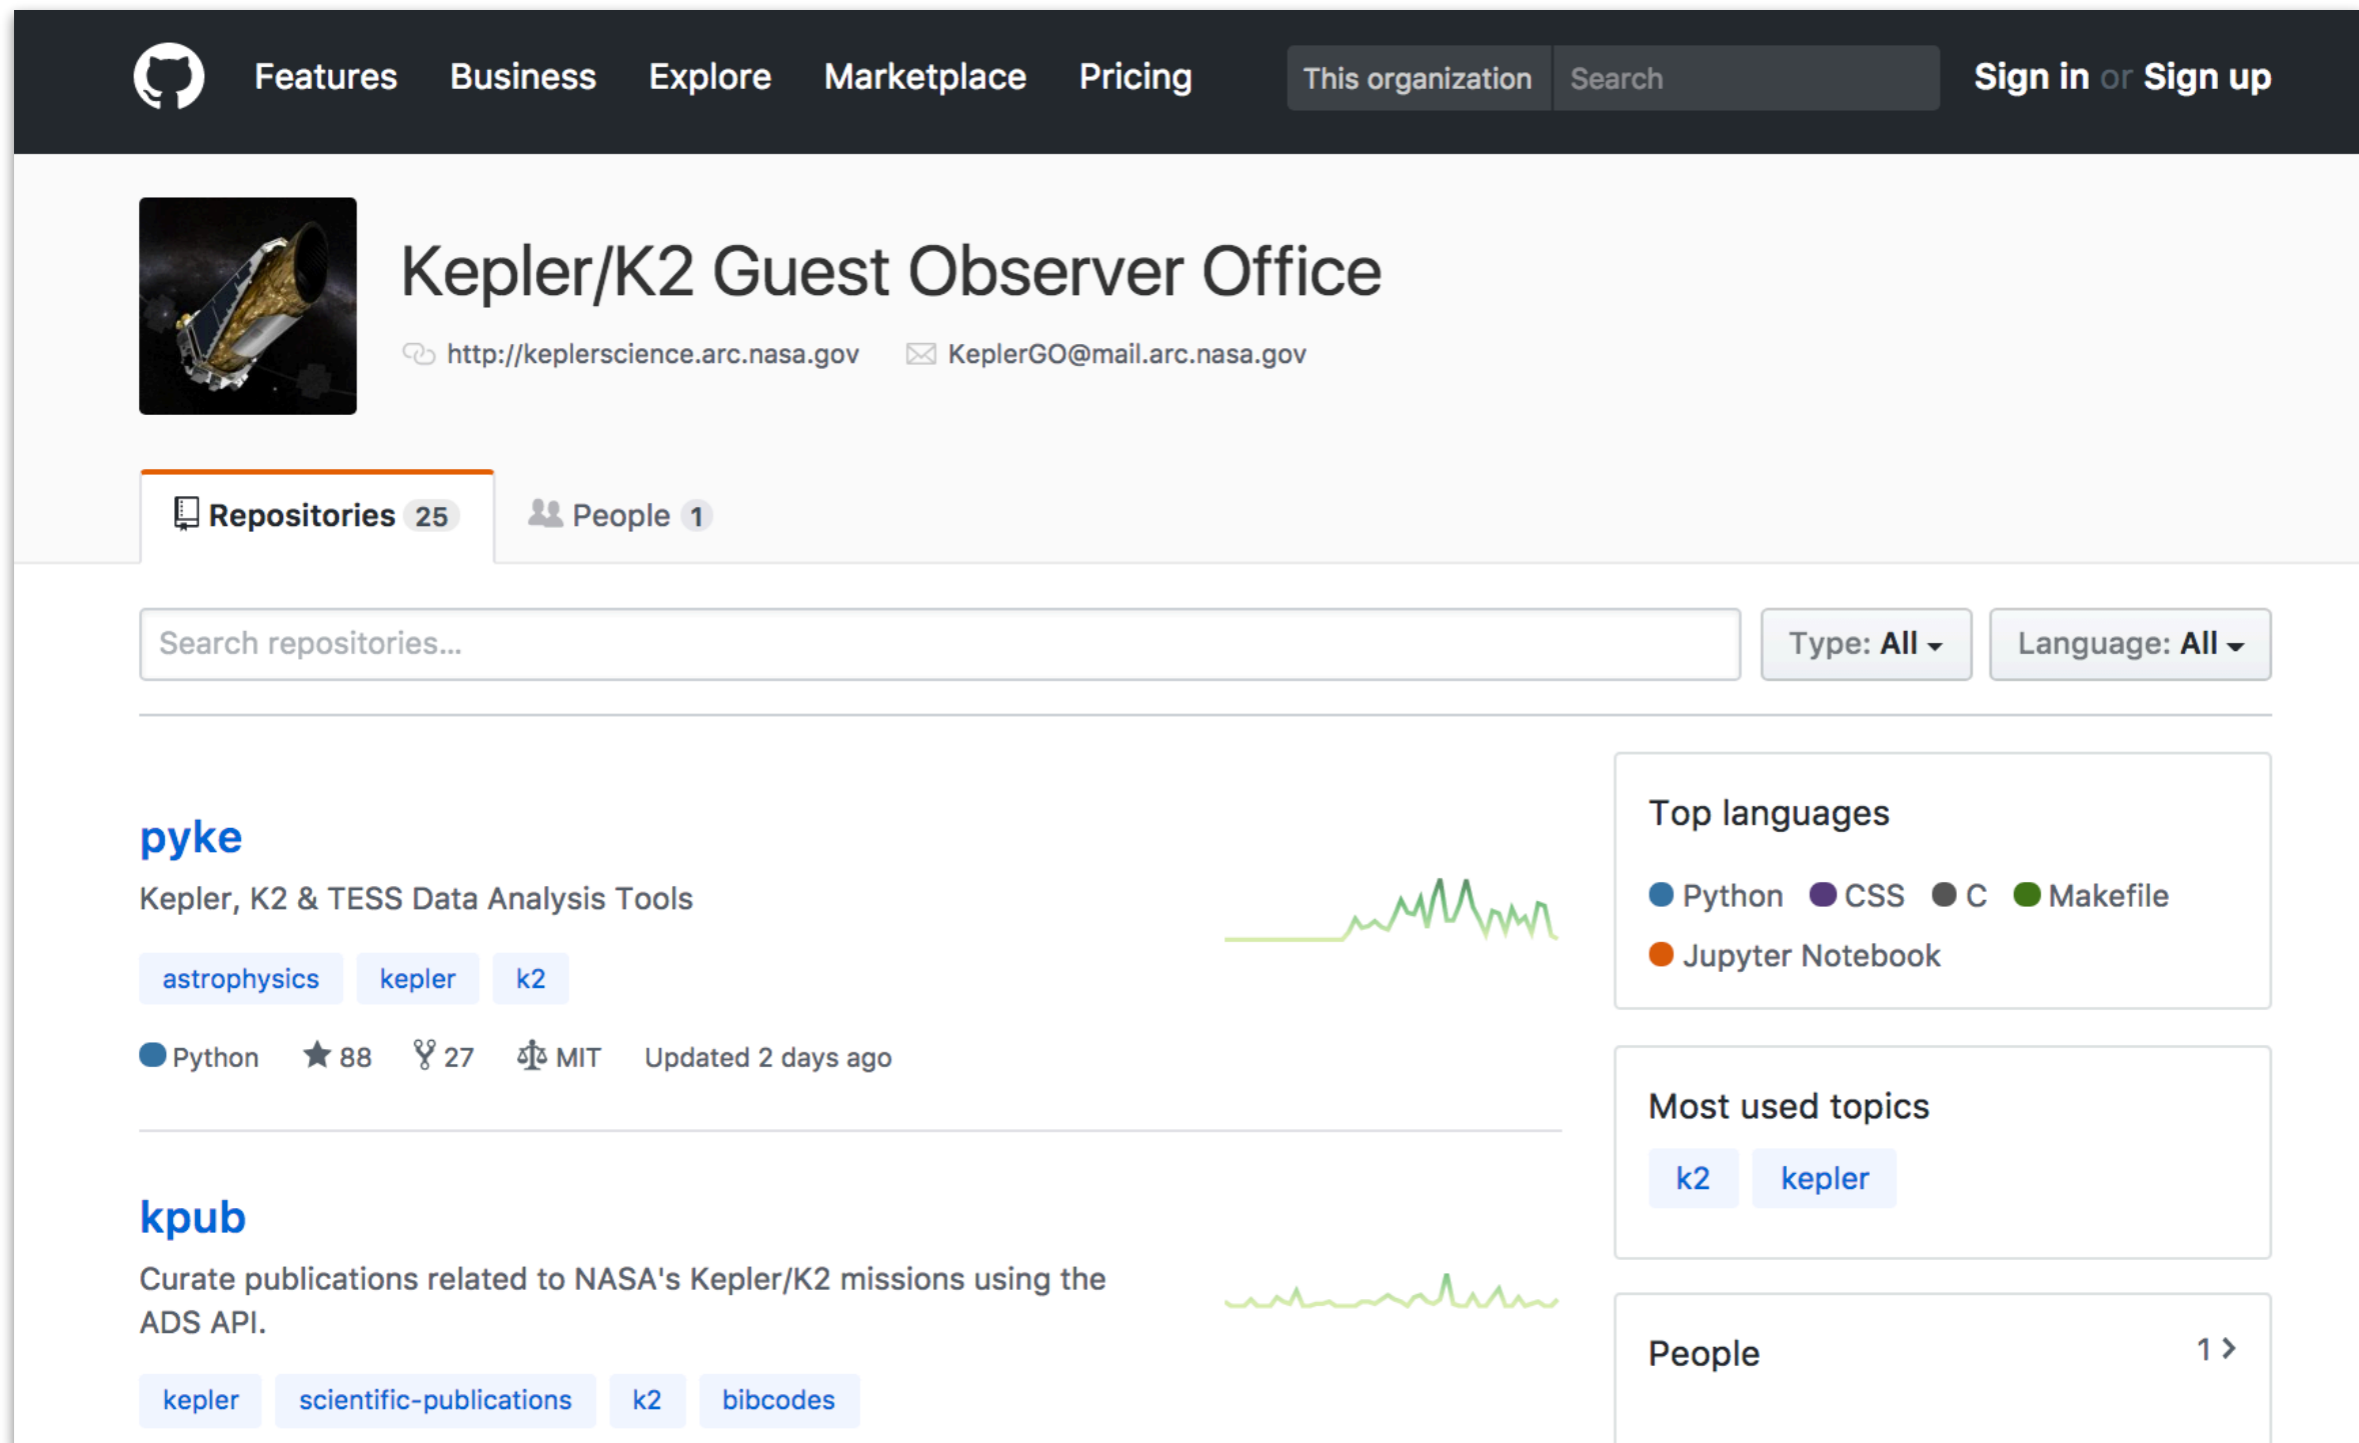

lightcurve = tpf.to_lightcurve().detrend(method="sff")
lightcurve.fold(phase=274.1, period=31.4).plot()
```

PyKE is turning into a powerful PSF photometry tool

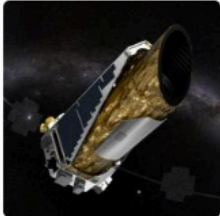

All our tools and tutorials are on GitHub – we encourage pull requests!

The screenshot shows the GitHub organization page for the Kepler/K2 Guest Observer Office. The top navigation bar includes links for Features, Business, Explore, Marketplace, Pricing, and a search bar. The organization's profile includes a logo of the Kepler spacecraft, the name 'Kepler/K2 Guest Observer Office', and contact information. Below the profile, there are tabs for 'Repositories 25' and 'People 1'. A search bar for repositories is present, along with filters for 'Type: All' and 'Language: All'. The main content area displays two repositories: 'pyke' (Kepler, K2 & TESS Data Analysis Tools) and 'kpub' (Curate publications related to NASA's Kepler/K2 missions). The 'pyke' repository is highlighted with a green line graph showing activity. The right sidebar contains sections for 'Top languages' (Python, CSS, C, Makefile, Jupyter Notebook) and 'Most used topics' (k2, kepler). A 'People' section at the bottom right shows '1 >'.
