

WE DO NOT KNOW
what drives black hole spins
in binary black hole mergers detected via gravitational waves?

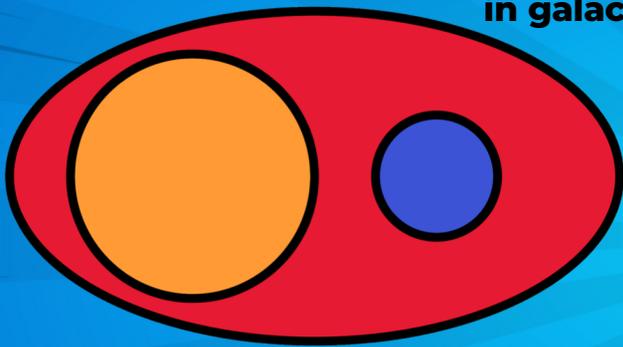

Vishal Baibhav
Columbia University

LIGO-Virgo-Kagra have detected

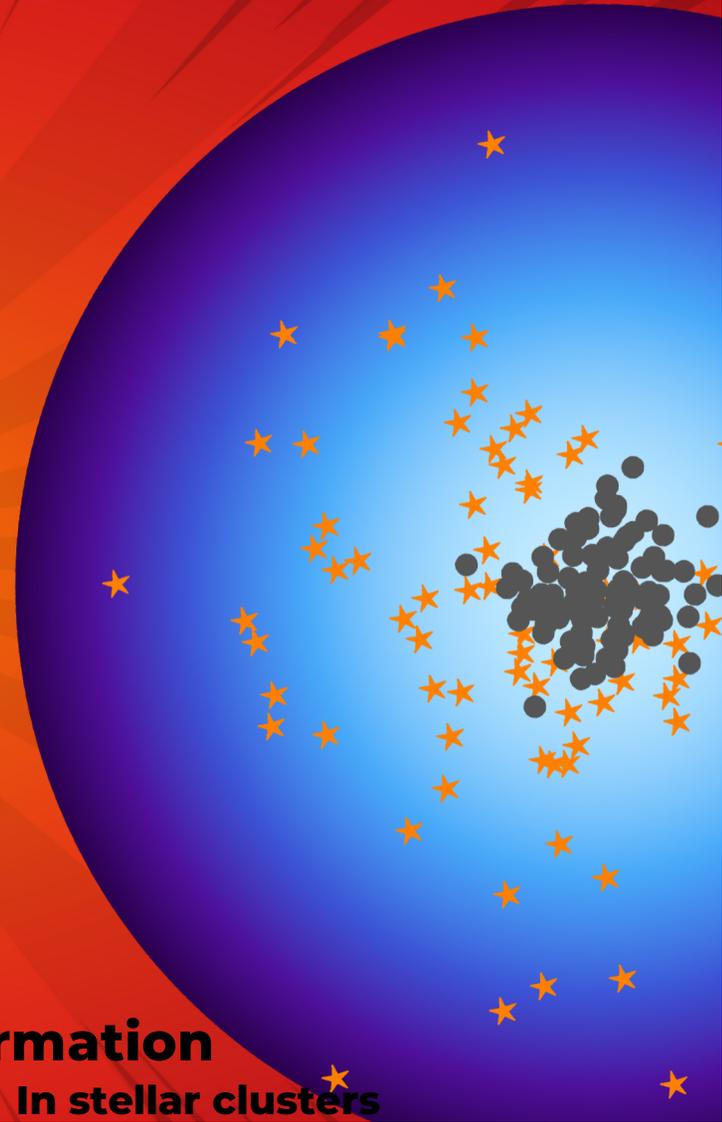

90 mergers

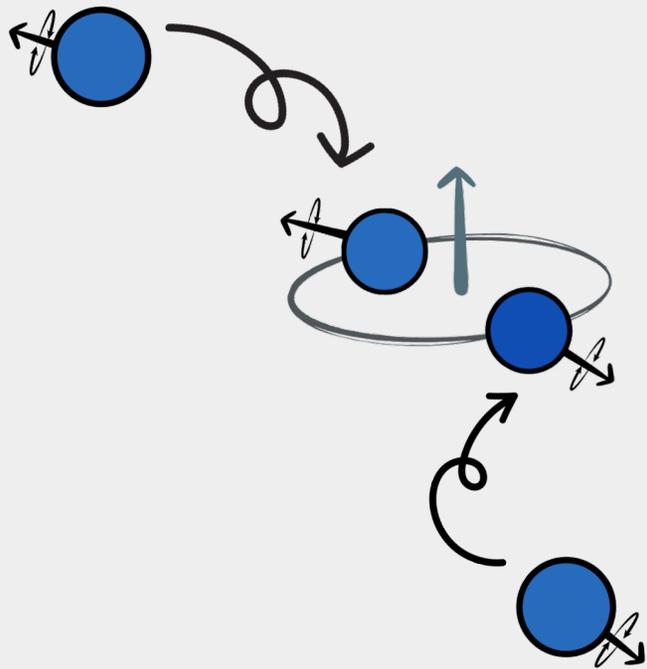

involving black holes and neutron stars

Isolated binary evolution
in galactic fields

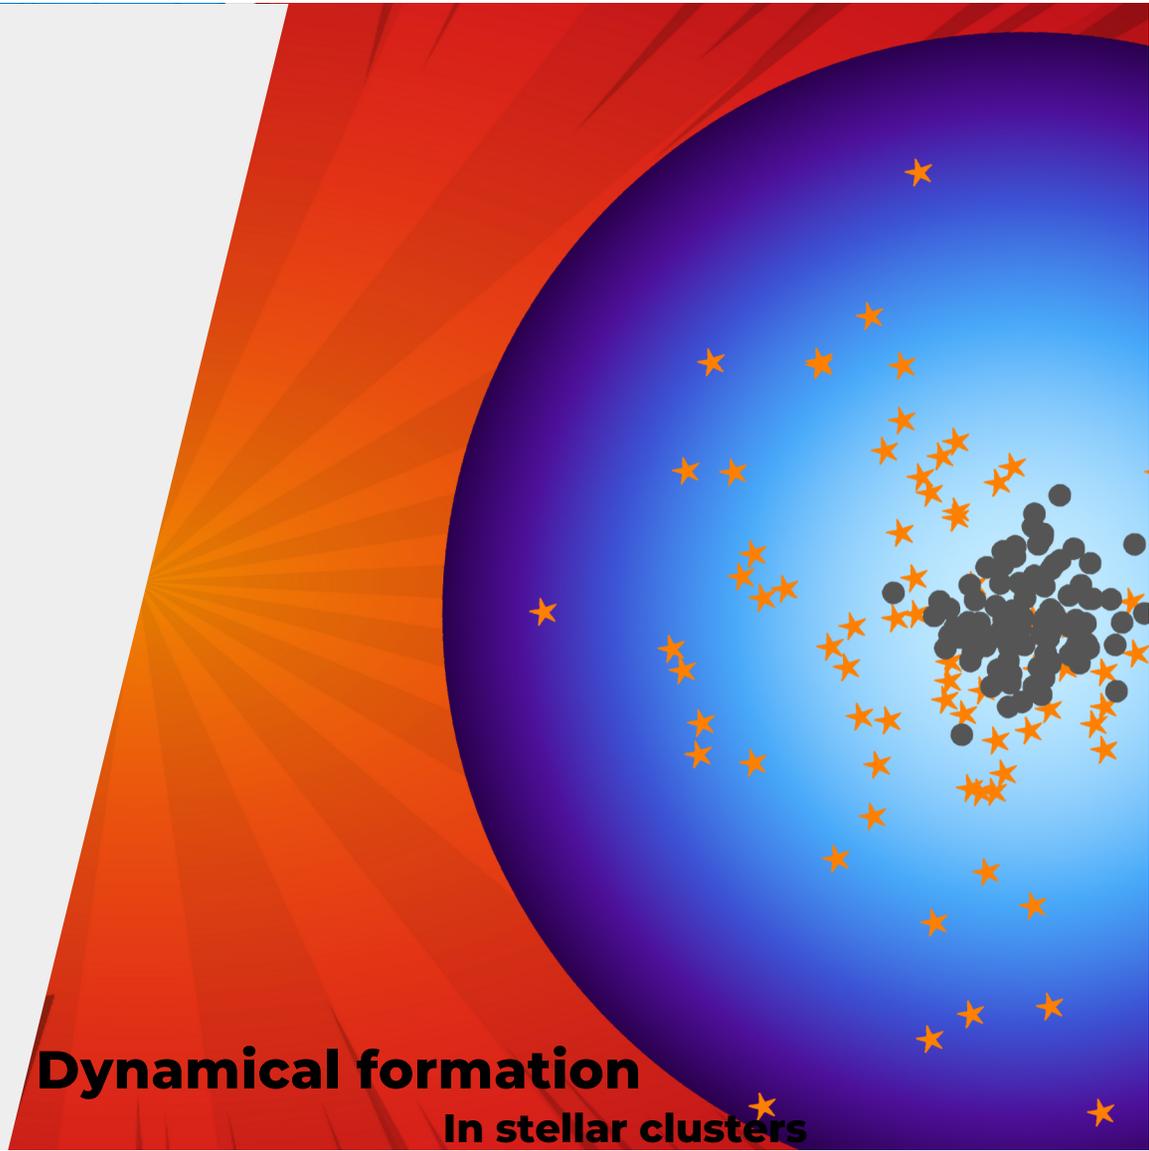

Dynamical formation
In stellar clusters

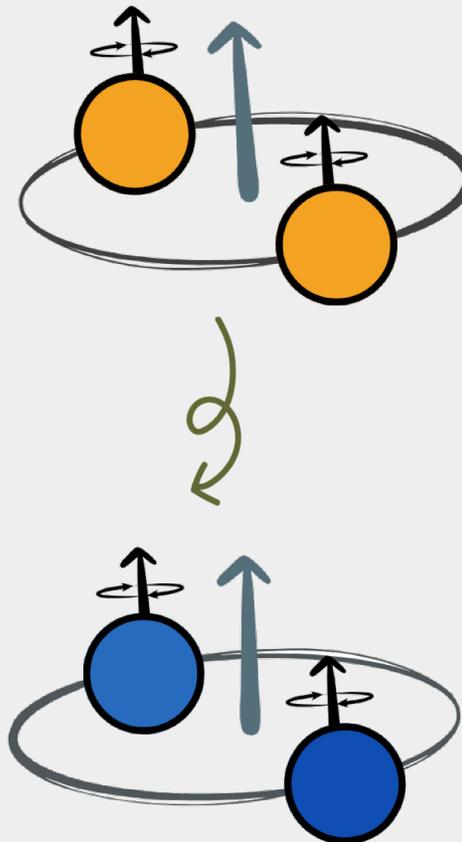

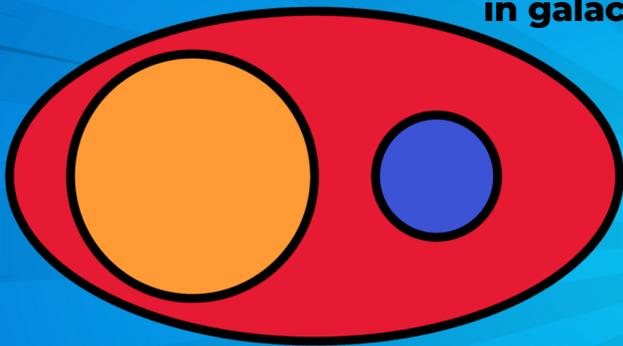

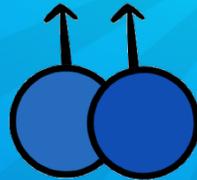

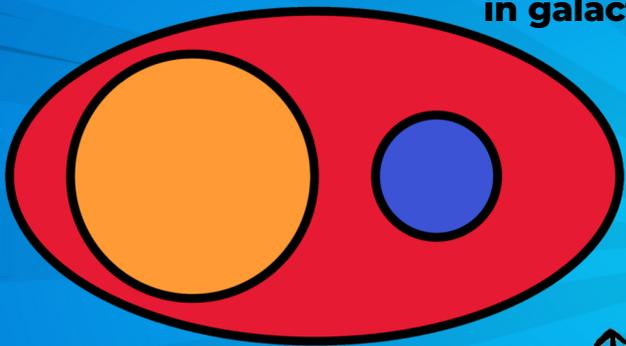

Dynamical formation
In stellar clusters

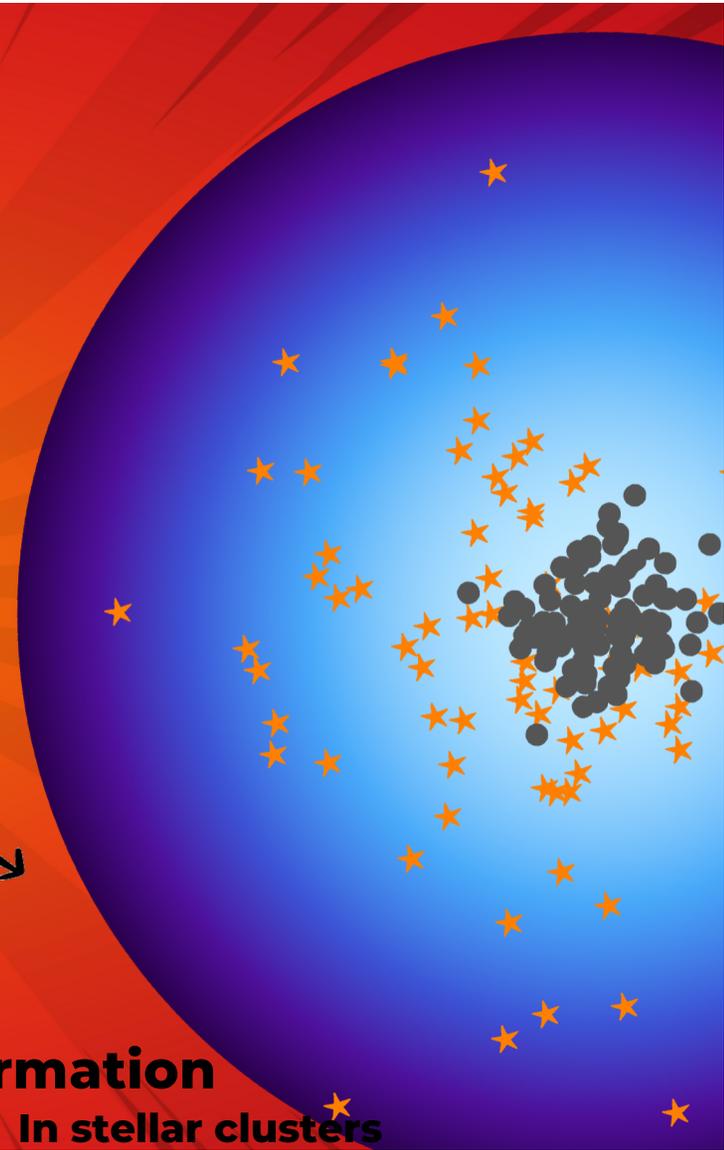

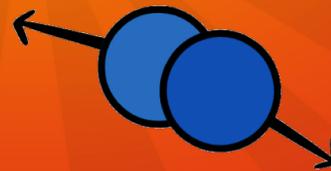

Isolated binary evolution in galactic fields

Isolated binary evolution
in galactic fields

Dynamical formation
In stellar clusters

Conclusion

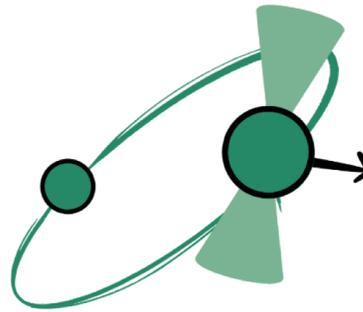

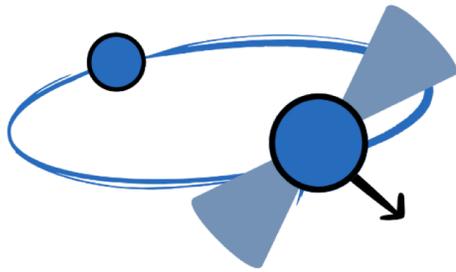

**Only dynamical environments can
produce highly misaligned binaries**

NO

Problem 1.

EM observations do not support the popular theory

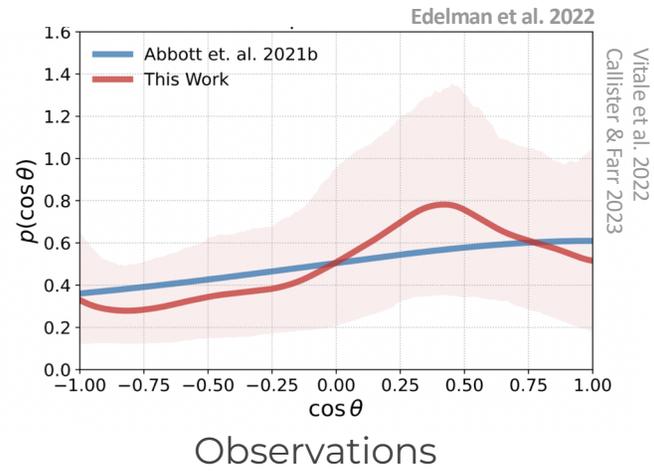

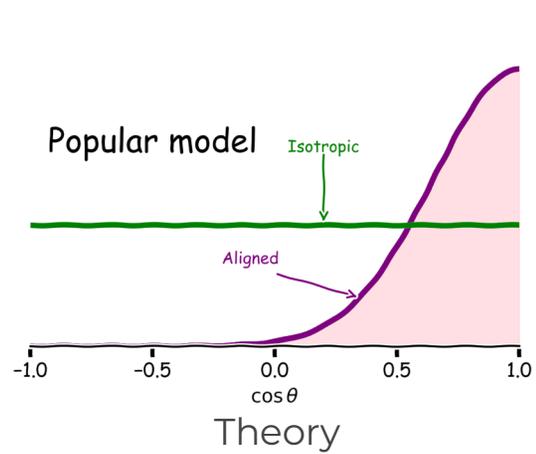

PSR J0737-3039: $130 \pm 1^\circ$
PSR J1906+0746: $104 \pm 10^\circ$
PSR J1141-6545: $38^\circ \pm 13$, $150 \pm 20^\circ$
MAXI J1820+070: 42° , 63° , 117° , 138°

Breton et al. 2008
Desvignes et al. 2019
Krishnan et al. (2019)
Poutanen et al. (2022)

Compact objects in isolated binaries
do not have spins aligned with orbital angular momentum

Problem 2.

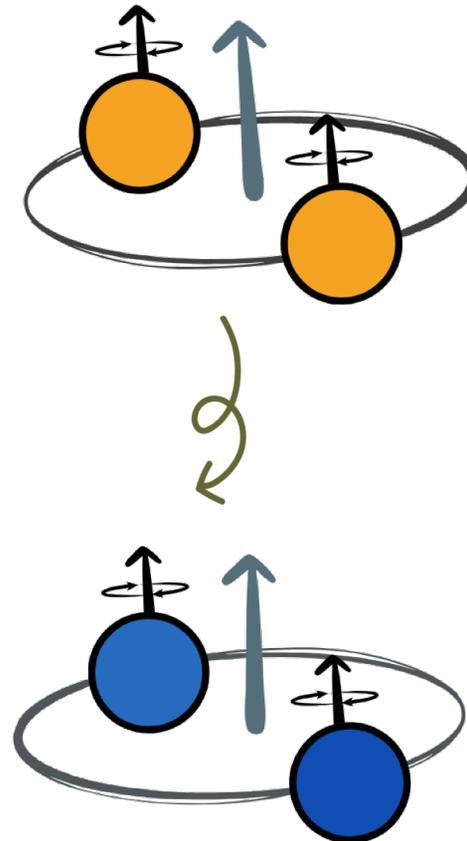

GW observations do not support the popular theory

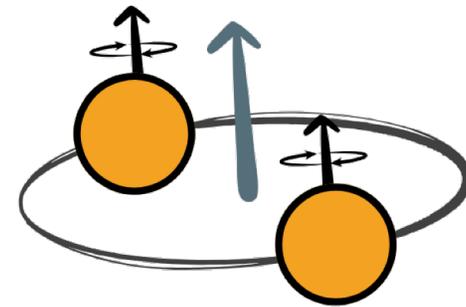

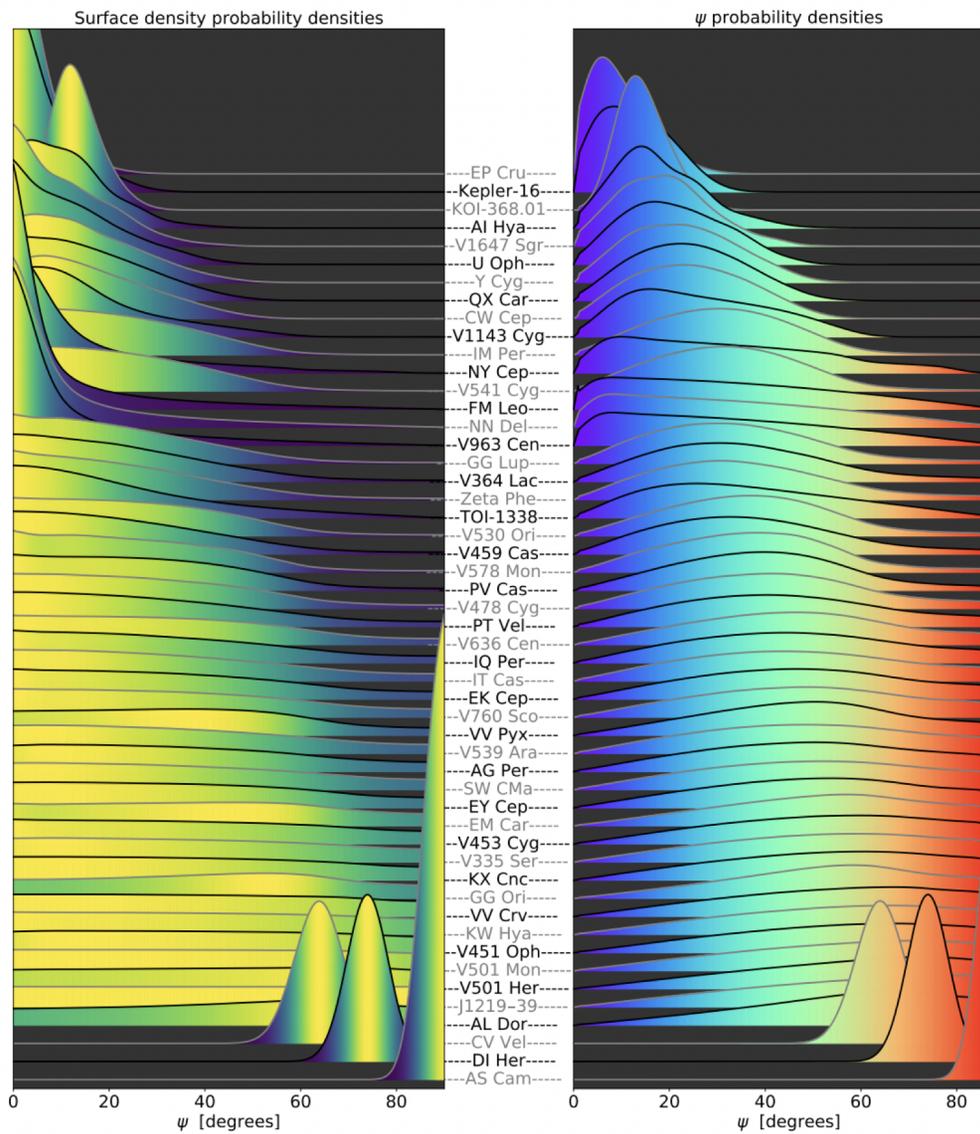

The popular model predicts a peak at zero tilt, yet observations hint non-zero tilt peak.

WE DO NOT KNOW
what drives black hole spins?

1. Natal spins

BANANA Project

Binaries Are Not Always Neatly Aligned

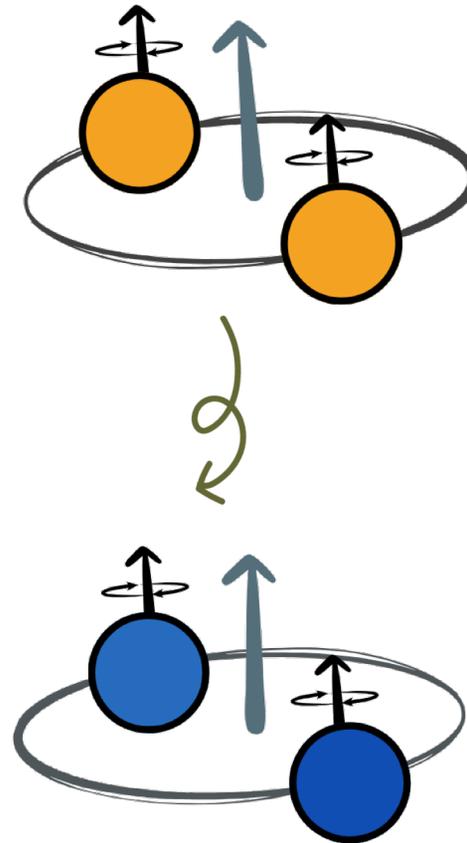

Albrecht+ 2010

Albrecht+ 2012

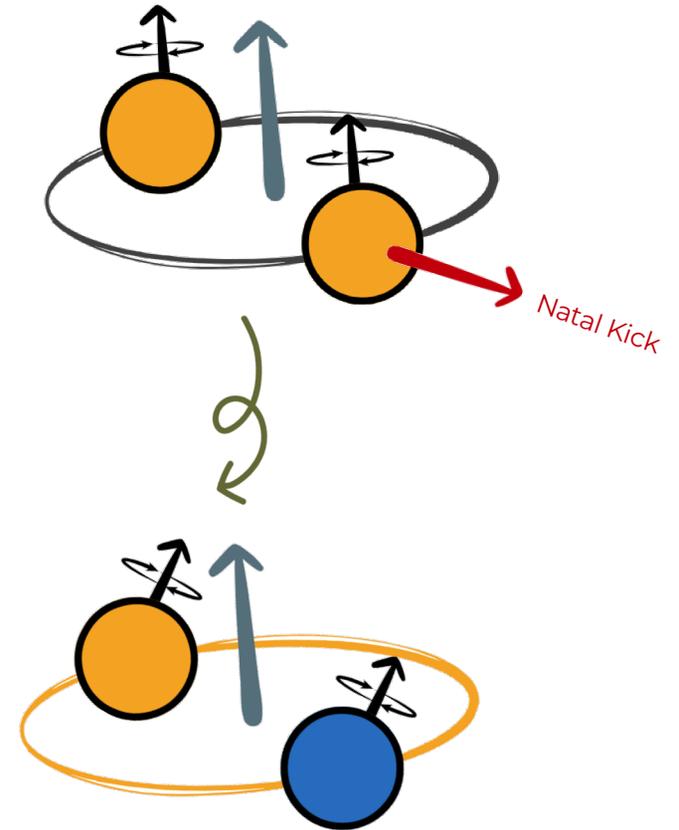

Albrecht+ 2014

Marcussen, Albrecht. 2021

1. Natal spins

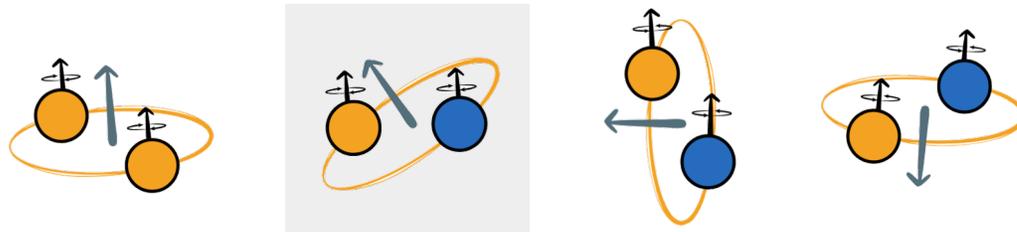

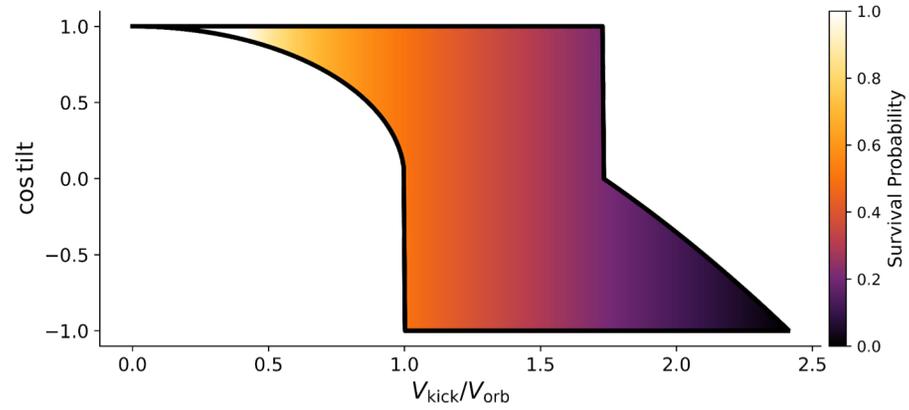

1. Natal spins

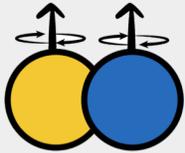

1. Natal spins

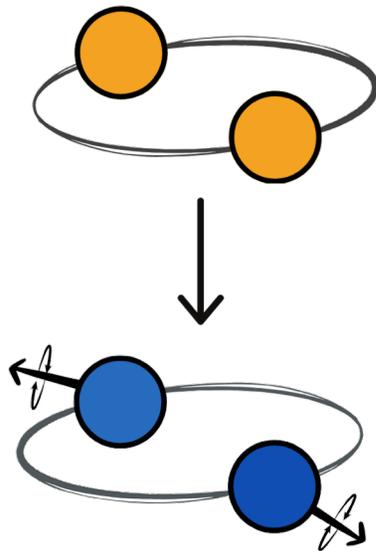

Higher Natal Kicks, Greater Spin Tilts, More Disruption

1. Natal spins

2. Isotropic spins

When black holes don't inherit spins from the star:

internal gravity waves, accreting convective layers, SASI

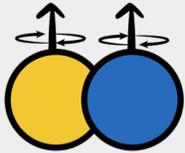

Fuller et al 2014

McNeill Muller 2020

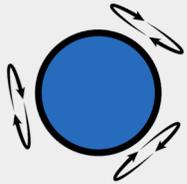

Antoni, Quataert 2021, 2023

See Tauris 2022

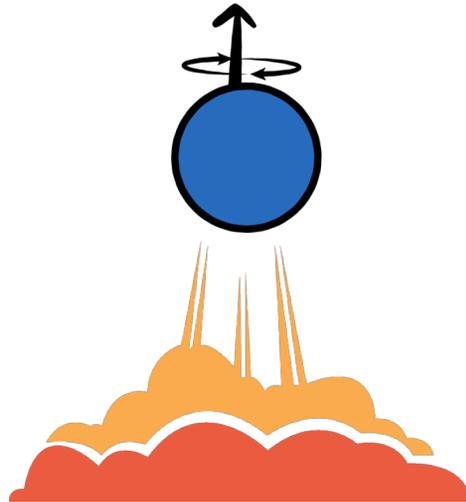

1. Natal spins

2. Isotropic spins

3. Spins parallel to Natal Kick

Pulsar observations

Noutsos et al. 2012, 2013

Core-Collapse Simulations & Hydrodynamical mechanisms

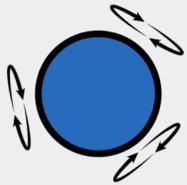

Janka et al 2021

Burrows et al 2023

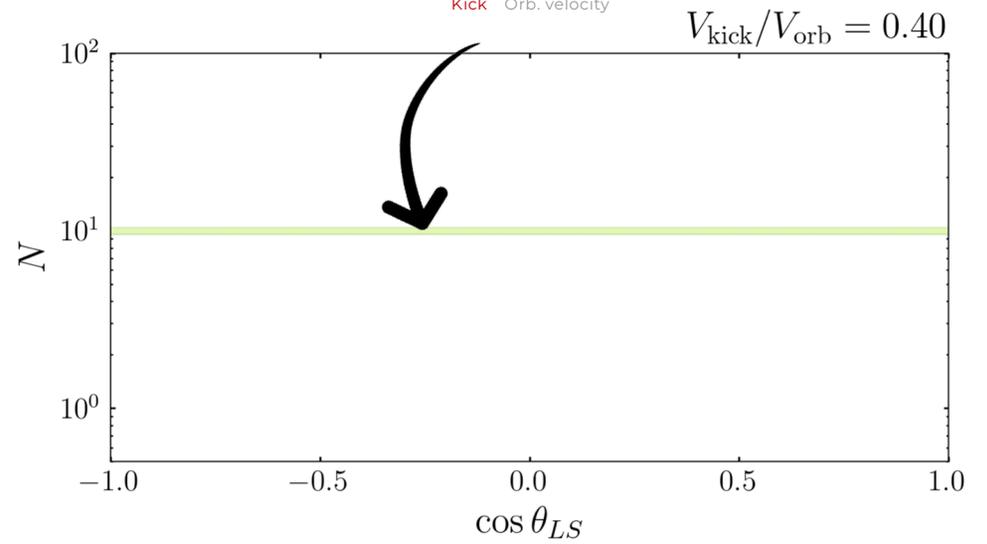

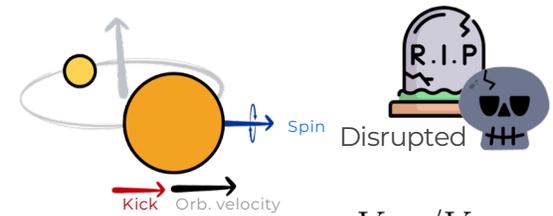

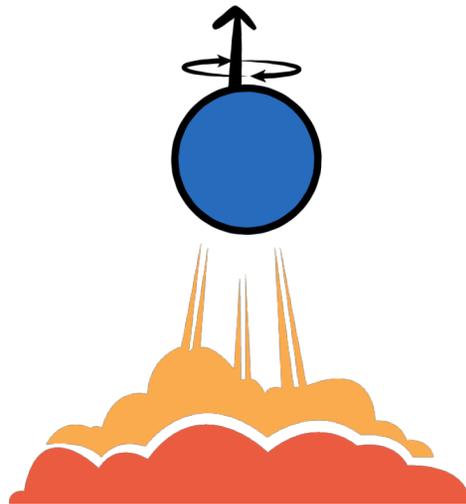

1. Natal spins

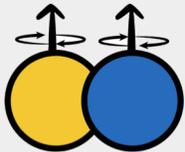

2. Isotropic spins

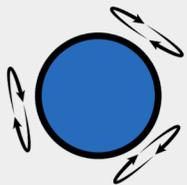

3. Spins parallel to Natal Kick

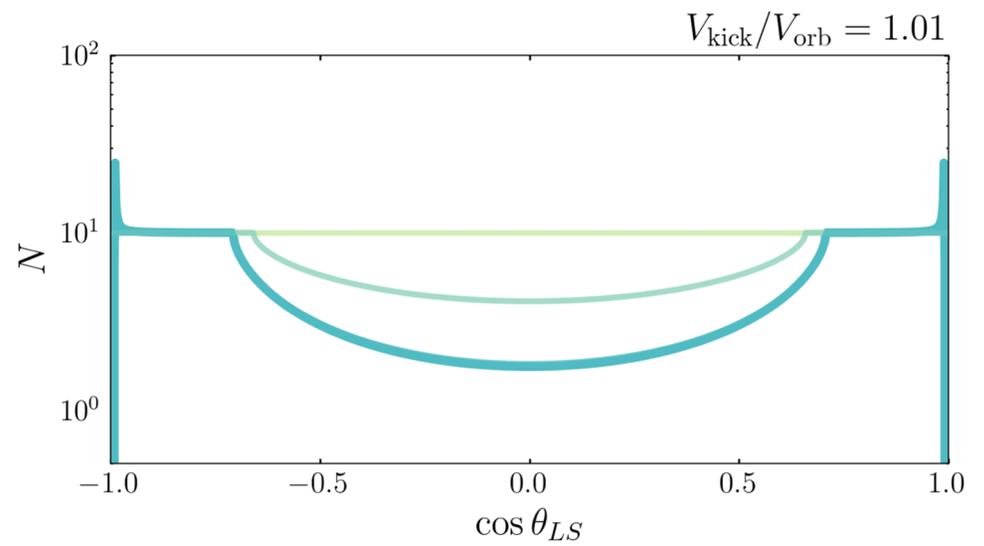

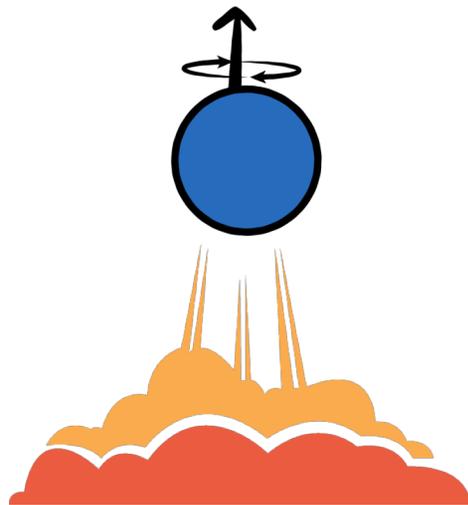

1. Natal spins

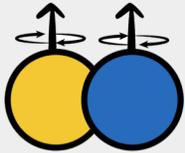

2. Isotropic spins

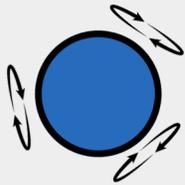

3. Spins parallel to Natal Kick

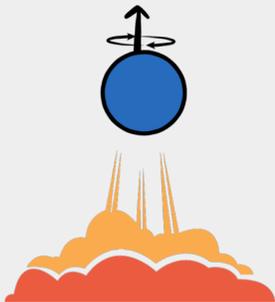

1. Natal spins

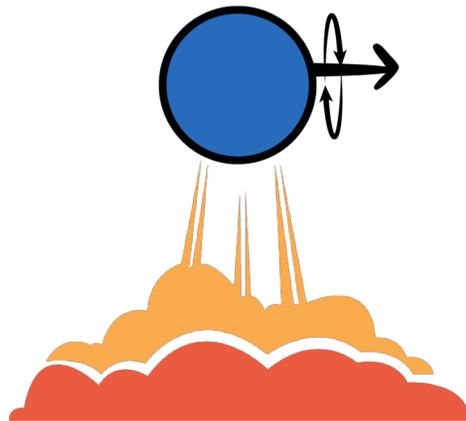

2. Isotropic spins

3. Spin || Kick

4. Spins perpendicular to Natal Kick

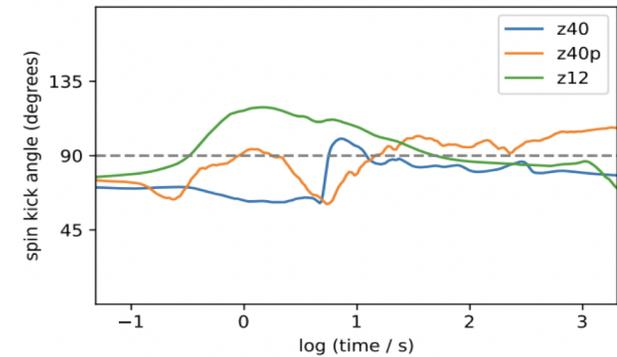

Off-center explosions, Asymmetric fallback of ejecta

Phinney Spruit 1998

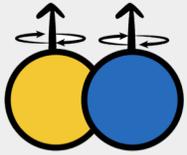

Farr et al 2011

Muller et al 2018

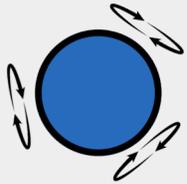

Chan Muller Heger 2020

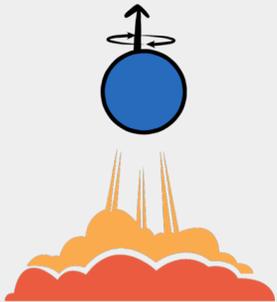

1. Natal spins

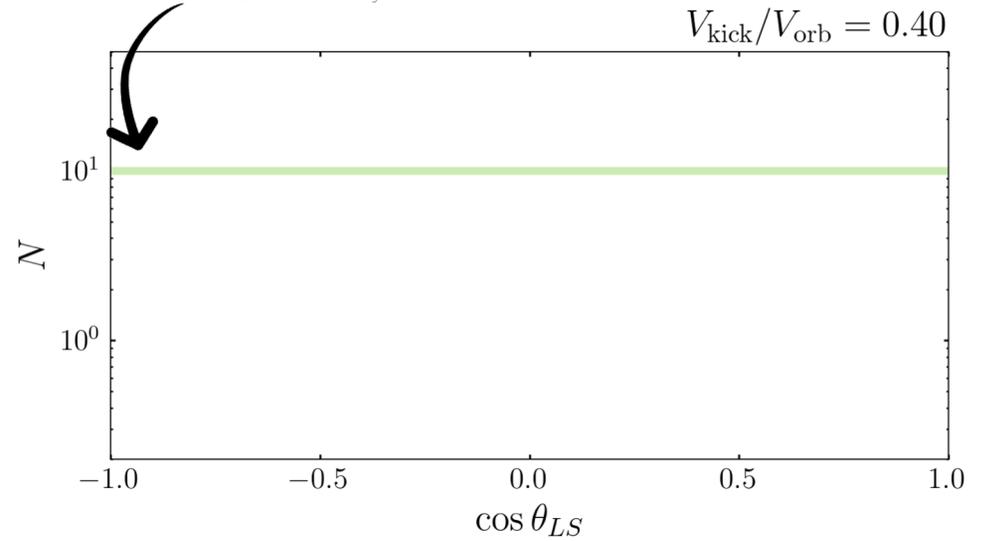

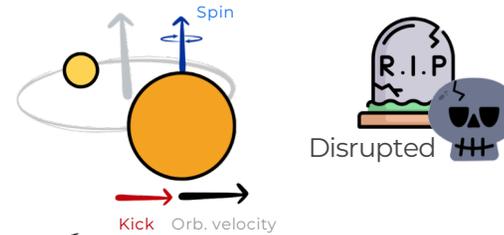

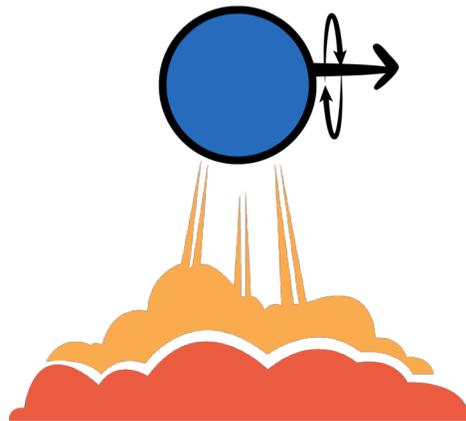

2. Isotropic spins

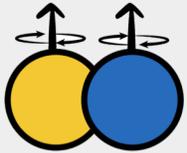

3. Spin || Kick

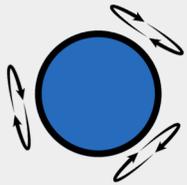

4. Spins perpendicular to Natal Kick

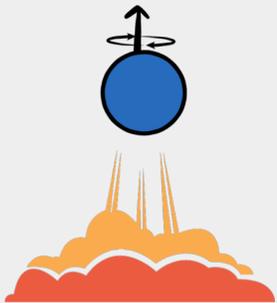

1. Natal spins

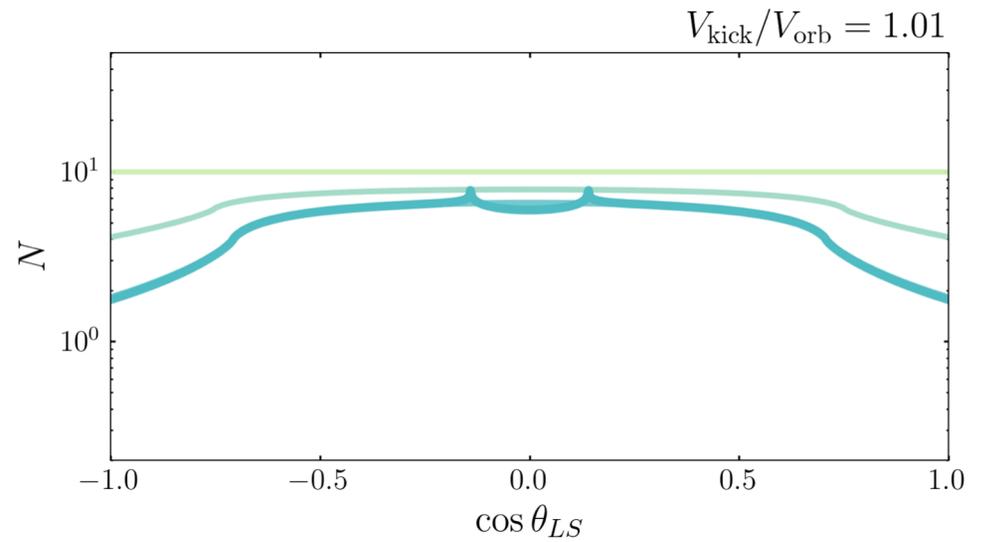

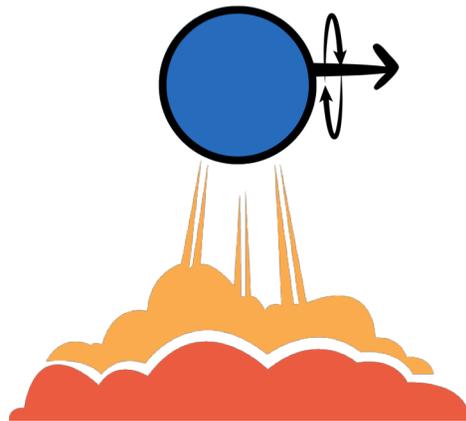

2. Isotropic spins

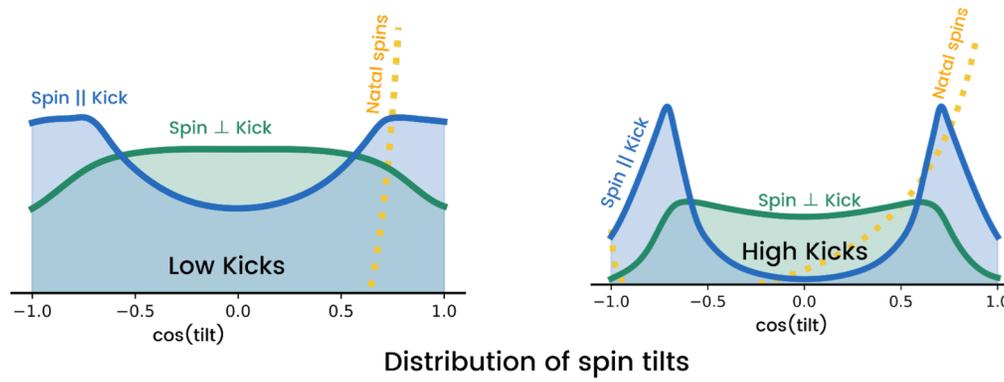

3. Spin || Kick

4. Spins perpendicular to Natal Kick

WE DO NOT KNOW what drives black hole spins?

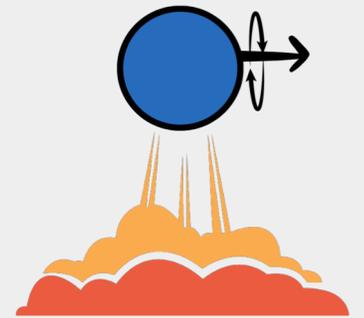

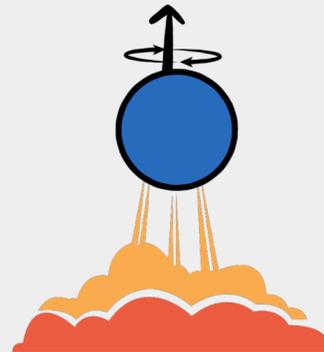

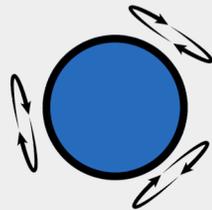

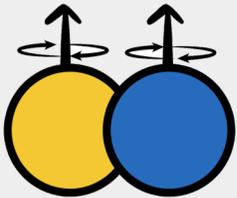

Natal spins

Isotropic spins

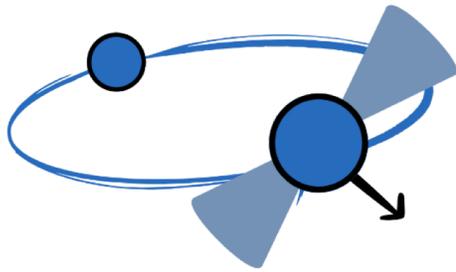

Spin || Kick

Spin \perp Kick

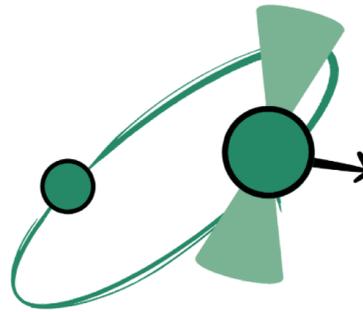

Problem 1.

EM observations do not support the popular theory

PSR J0737-3039: $130 \pm 1^\circ$
PSR J1906+0746: $104 \pm 10^\circ$
PSR J1141-6545: $38^\circ \pm 13$, $150 \pm 20^\circ$
MAXI J1820+070: 42° , 63° , 117° , 138°

Breton et al. 2008
Desvignes et al. 2019
Krishnan et al. (2019)
Poutanen et al. (2022)

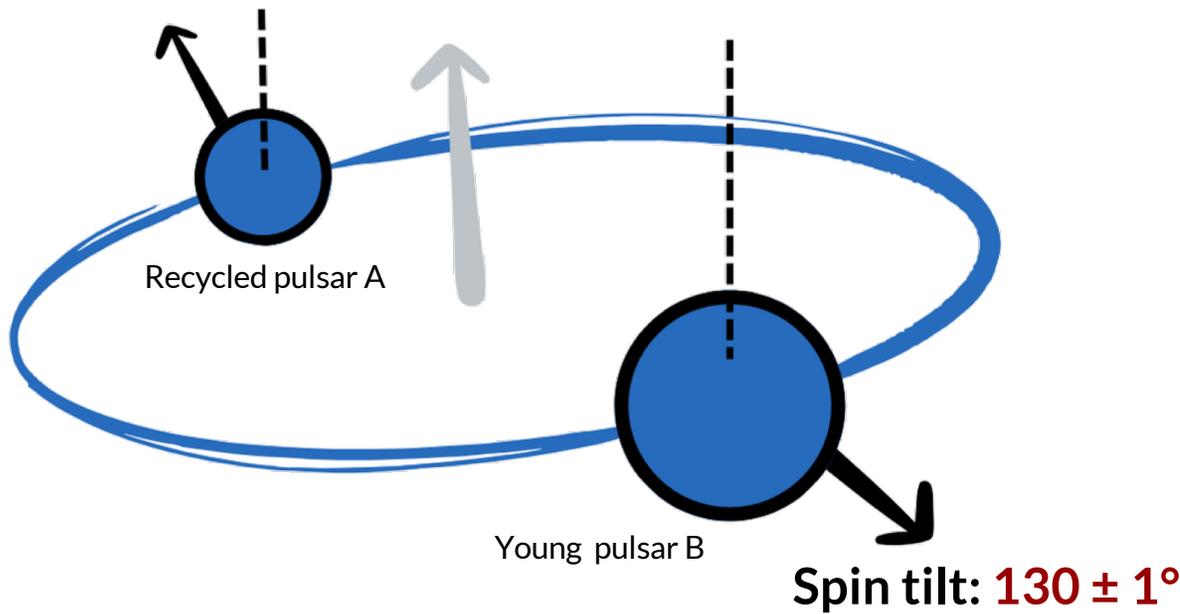

Need small natal kicks

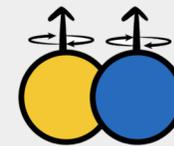

$$V_{\text{kick}} < 0.5 V_{\text{orb}}$$

(95% upper limit)

Spin tilt: $< 3^\circ$

PSR J0737-3039 A/B

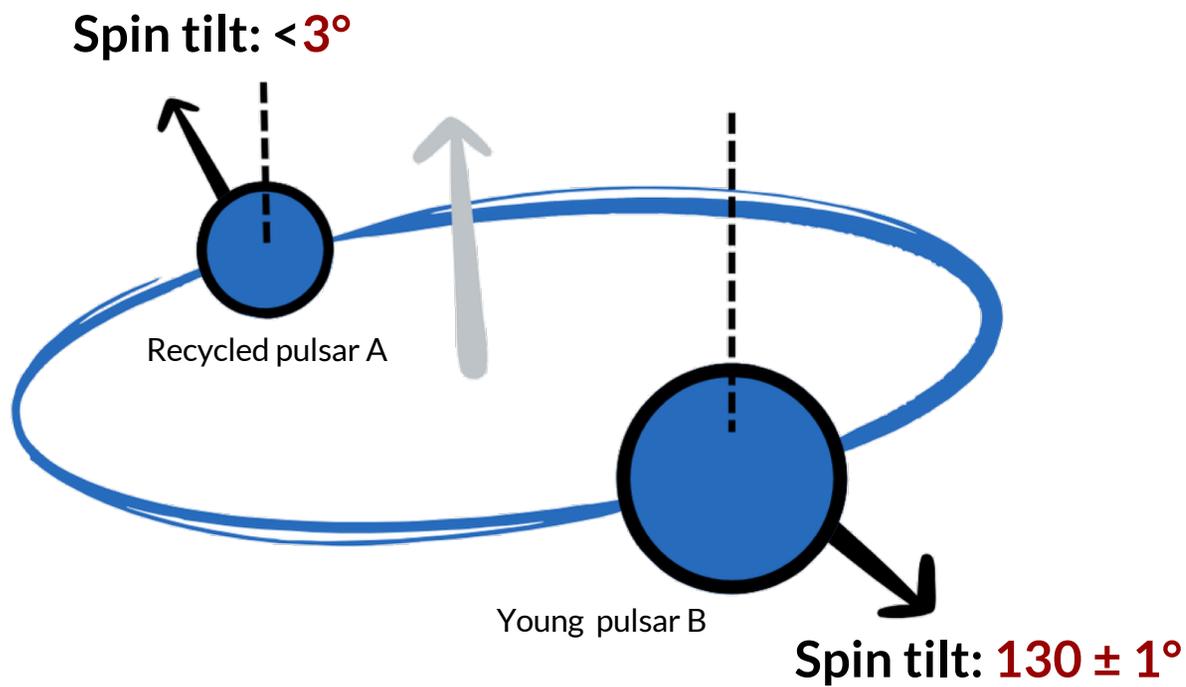

Natal spins

Need large natal kicks

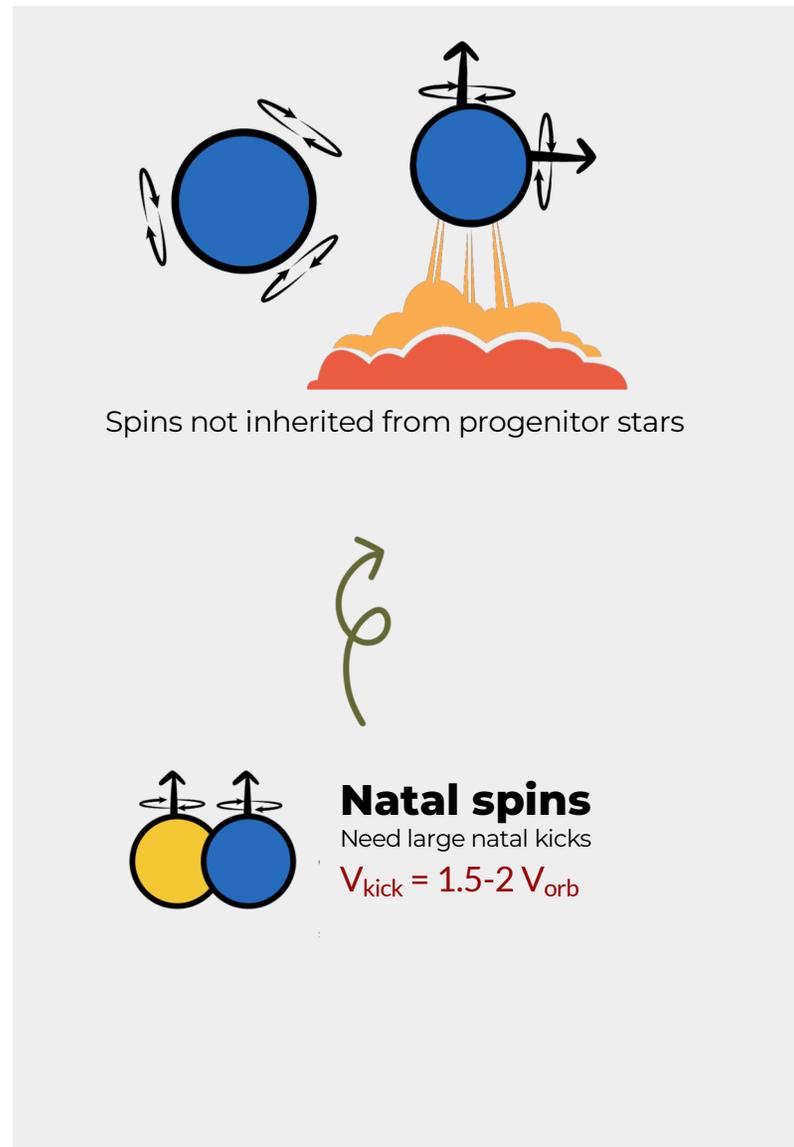

$$V_{\text{kick}} = 1.5-2 V_{\text{orb}}$$

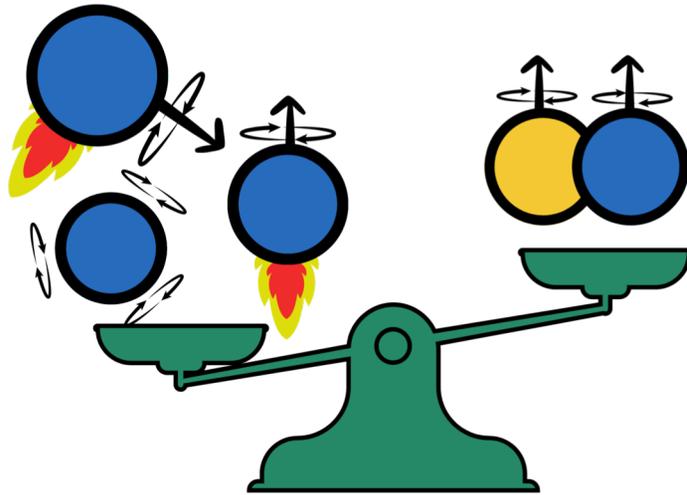

Inconsistent with Pulsar A

70-90% of the systems
would be **disrupted**

PSR J0737-3039 A/B

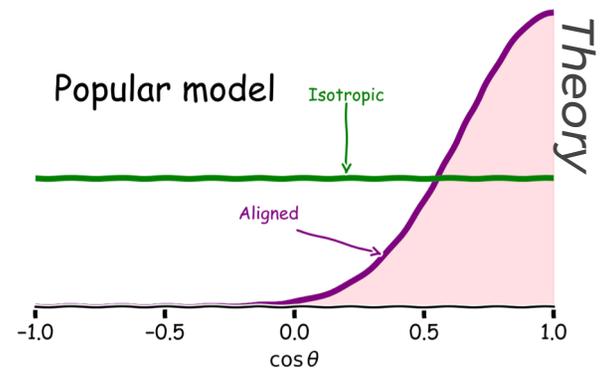

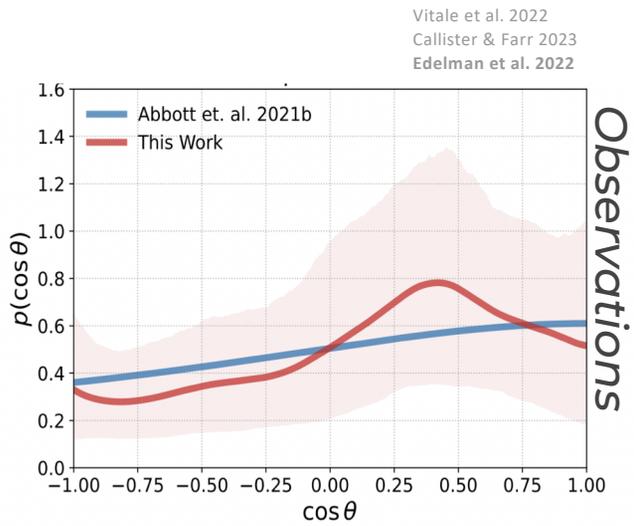

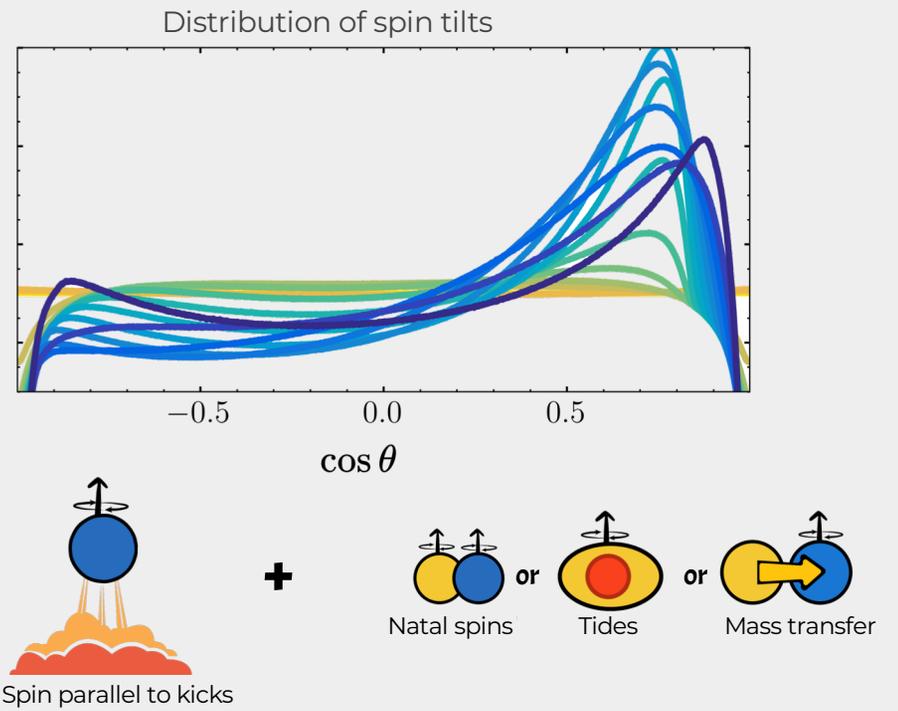

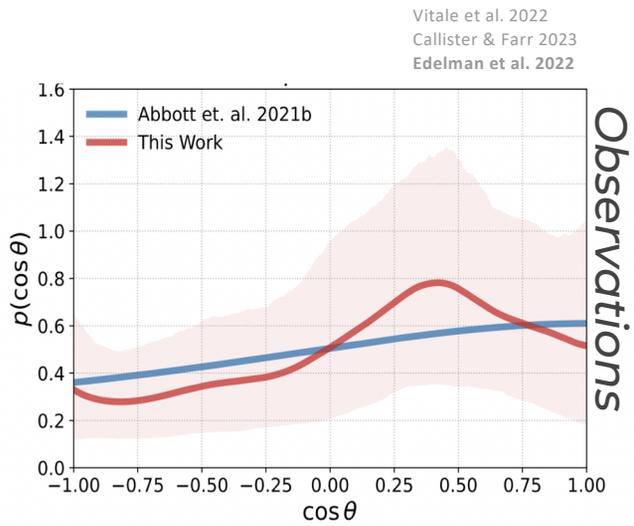

Natal spin model is disfavored with a

Bayes factor >10

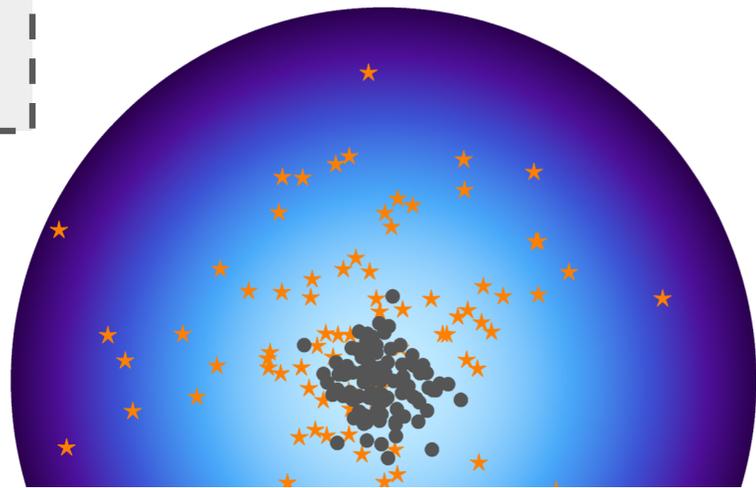

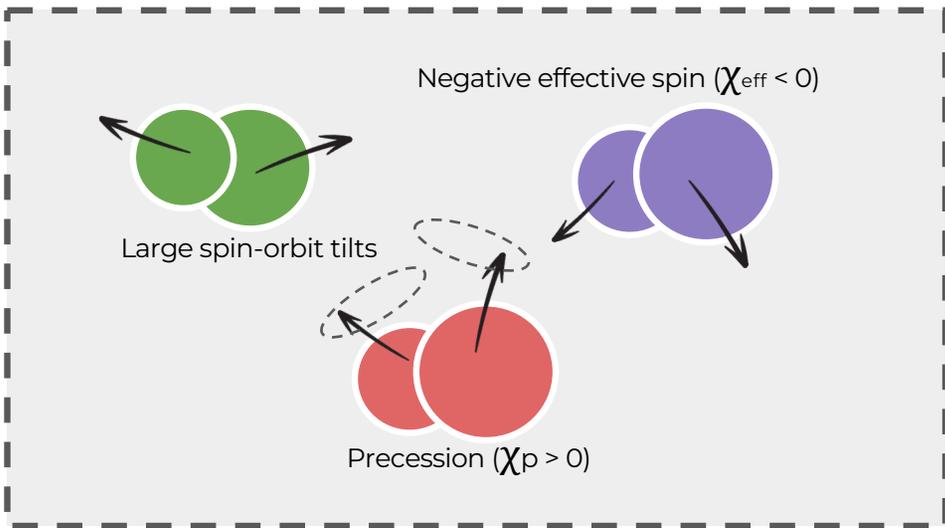

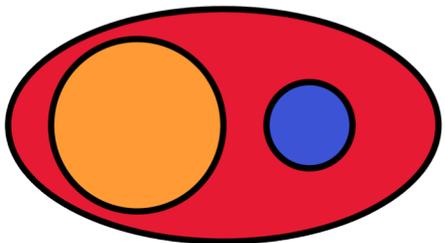

Problem 2.

GW observations do not support the popular theory

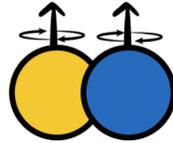

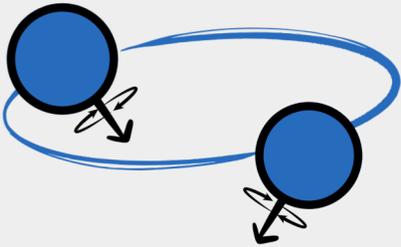

Can BH Spins Reveal the formation pathways of GW sources?

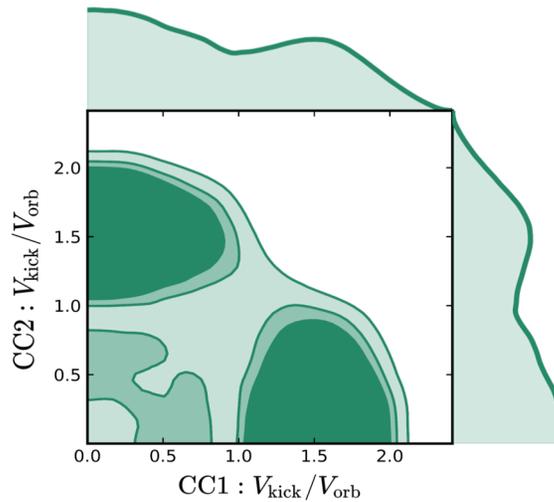

GW191109

Negative χ_{eff}

Natal spins

Need large natal kicks to explain large misalignments

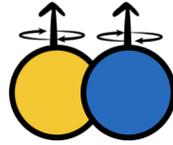

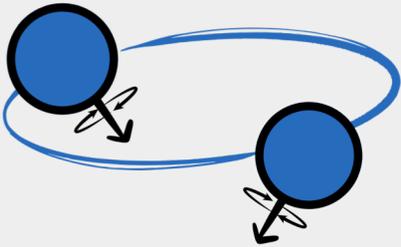

~90% of the systems
would be **disrupted**

Was GW191109 assembled
dynamically in stellar clusters?

- Zhang et al 2023

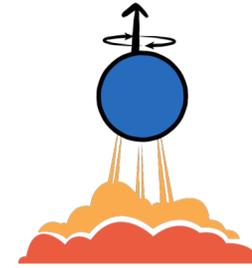

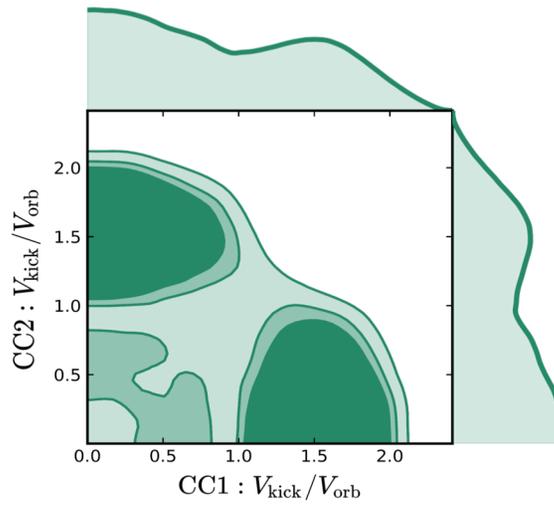

GW191109

Negative χ_{eff}

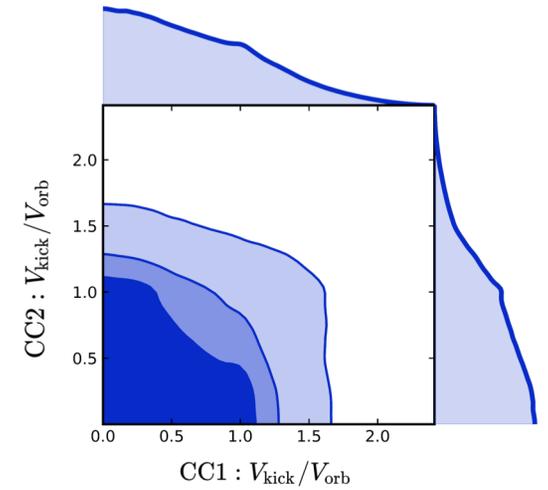

Natal spins

Need large natal kicks to explain large misalignments

Spin parallel to kicks

large natal kicks are not required

Conclusion

Only dynamical environments can produce highly misaligned binaries

NO
