

Research summary

- Looking for exoplanets with the radial-velocity method (e.g., around evolved stars & young stars)

- see my poster for a close planet around a hot WD
- More survey is ongoing

- Characterizing exo-planetary atmosphere by transmission or emission spectroscopy

- Re-analyze archival ISAAC L band data of HD209458b (secondary eclipse) – not yet finished
- Analyze our recent Xshooter data of XO-1b (primary eclipse)

Wei Wang, Max Planck Institute for Astronomy, Heidelberg, Germany
